

Central Texas Wetland Plants

Field Guide

 WATERSHED
PROTECTION

About This Guide

Central Texas Wetland Plants is a collection of institutional knowledge and photos taken in and around the Austin area. It is not intended to be comprehensive, but rather to be used as a supplement to other resources when identifying plants in Central Texas. Special Thanks to wetland biologist emeritus Mike Lyday, whose 20 years of service, dedication and experience established the foundation for wetland protection in the City of Austin.

Wetland Indicator Categories

- **Obligate Wetland (OBL)**: Occur almost always in wetlands (probability >99%)
- **Facultative Wetland (FACW)**: Usually occur in wetlands (67%-99%)
- **Facultative (FAC)**: Equally likely to occur in wetlands or nonwetlands (34%-66%)
- **Facultative Upland (FACU)**: Occasionally found in wetlands (1%-33%)
- **Obligate Upland (UPL)**: Occur almost always in nonwetlands in the specified region

A positive (+) or negative (-) sign is used with the FAC category to indicate a regionally higher or lower frequency of being found in wetlands, respectively.

Photo credits: Mike Lyday, Bill Carr, Andrew Clamann, Morgan Grubbs, Emily Yeoman, and Scott Hiers

Table of Contents:

Equisetaceae (horsetail) [1]	p. 2
Polypodiaceae (true ferns) [2]	p. 4
Marsiliaceae (water clover) [1]	p. 8
Azollaceae (water fern) [1]	p. 10
Cupressaceae (cypress, redwood) [1]	p. 12
Lauraceae (laurel) [1]	p. 14

Lilaceae (lily) [1]	p. 268

Equisetum laevigatum
horsetail, scouring rush

Characteristics:

- Fern Ally: rhizomatous (blackish) evergreen perennial
- Stems: erect green, cylindric, fluted, jointed, 0.3-1.5 m tall, simple or whorled with branches, solid nodes and hollow internodes, rough with coats of silica
- Leaves: minute (toothed sheaths at nodes)
- Sporophylls: aggregated into a cone or strobile at apex of main stem, peltate scales cover sporangia
- Similar plants: *E. hyemale* has dark girdled sheaths and can be larger (to 3 m tall) and rougher than *E. laevigatum*
- Mar.-Late Fall

Equisetum laevigatum
horsetail, scouring rush

Adiantum capillus-veneris

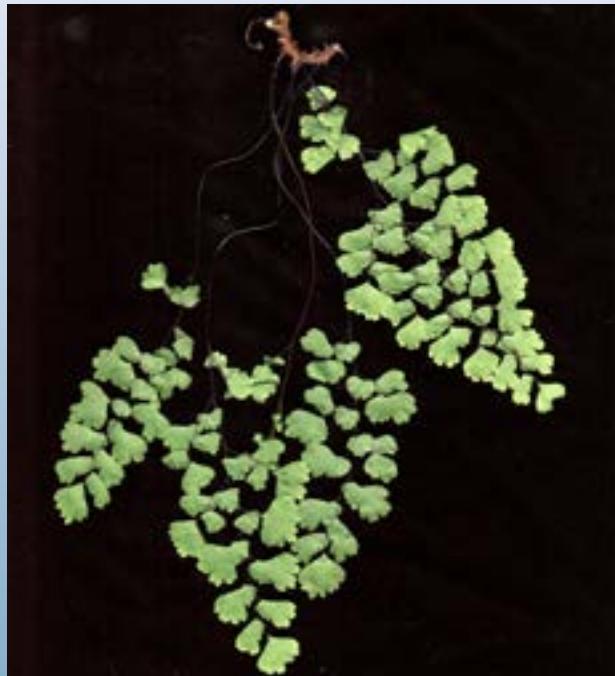

Southern maiden hair fern

Adiantum capillus-veneris

Southern maiden hair fern

**Characteristics:**

- Fern: common fern usually growing from wet rock ledges or tufa formations, rhizomatous
- Stipes: dark lustrous
- Fronds: pinna pinnate 2+, thin, alternate, wedge-shaped lobules crenate, bright green numerous, 40-150 cm long, glabrous, lax, petiolate (to 18 cm), obvate
- Sori marginal

Fac

Polypodiaceae (true ferns)

Thelypteris kunthii

widespread maiden fern, river fern

Fac

Polypodiaceae (true ferns)

Thelypteris kunthii

widespread maiden fern, river fern

Characteristics:

- Fern: rhizomatous, 0.5-1.5 m tall
- Fronds: erect, 30-70 cm long, blades lanceolate, lowest pinnae longest, 30-70 cm long, 1 1/2 pinnate (2nd pinnatifid)
- Rachis: pubescent (silvery-white), pinnae numerous, sessile, veins somewhat pubescent, pinnules numerous, linear oblong, rounded, margins rolled backward, sori medial, dorsal on veins
- Indusia: large and persistent, hairy

Obl

Marsileaceae (water clover)

Marsilea vestita (M. uncinata)

water clover, southern water fern

Obl

Marsileaceae (water clover)

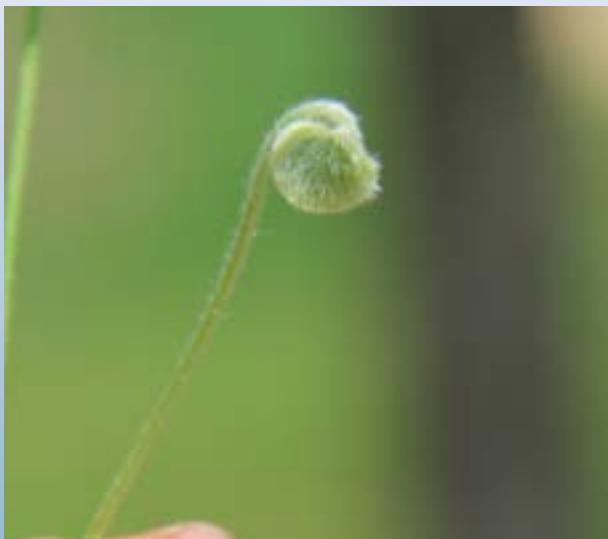

Marsilea vestita (M. uncinata)

water clover, southern water fern

Characteristics:

- Fern: 6-60 cm tall, rhizomes slender
- Leaves: on long thin petioles (to 19 cm), palmately divided into 4 obovate pinnae (looks like 4-leaf clover), sporocarps on stalks protruding as basal bumps covered by reddish hair
- Similar plants: *M. tenifolia* if pinnae are narrow; *M. macropoda* if petioles > 19 cm
- Mar.-Oct.

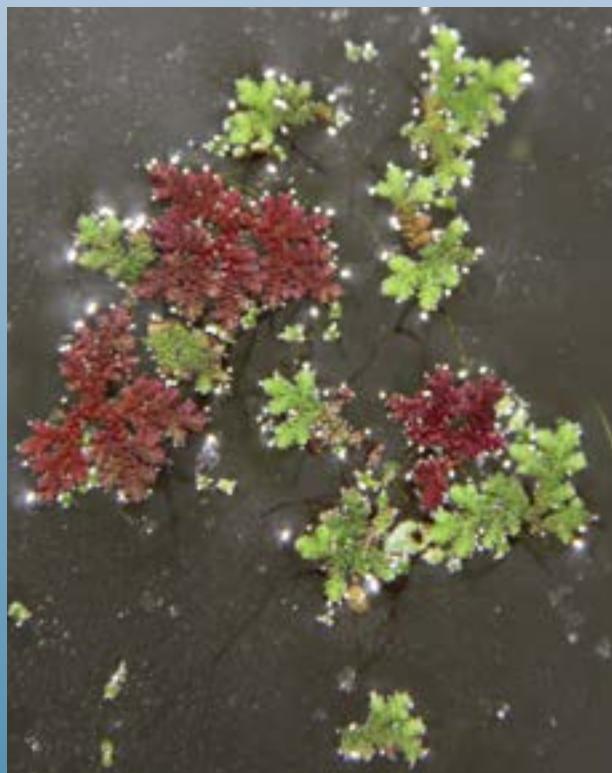

Azolla caroliniana
Carolina mosquito fern

Azolla caroliniana
Carolina mosquito fern

Characteristics:

- Fern: small reddish or green floating, mat forming plant
- Stems: pinnately branched but concealed by imbricating leaves
- Leaves: 2-lobed (one floating and the other submersed), sporocarps in 1-2 pairs on lower leaf
- Similar plants: duck weed (*Lemna* spp.)
- Roots: hanging

Obl

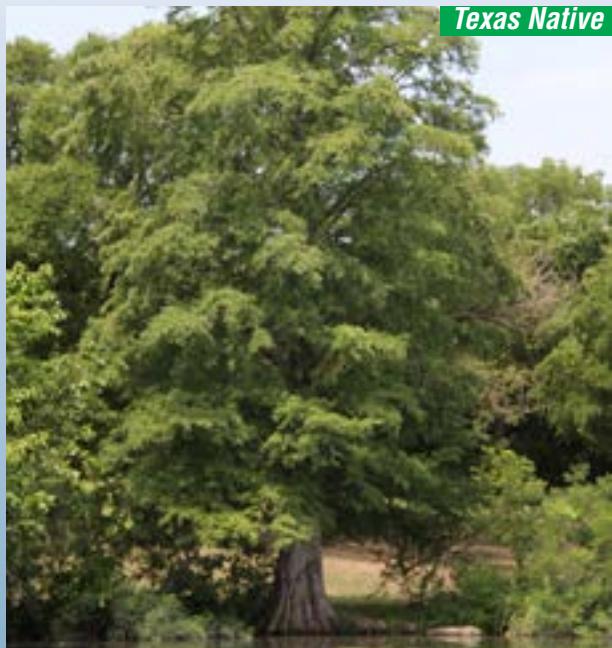

Cupressaceae (cypress, redwood)

Taxodium distichum
bald cypress

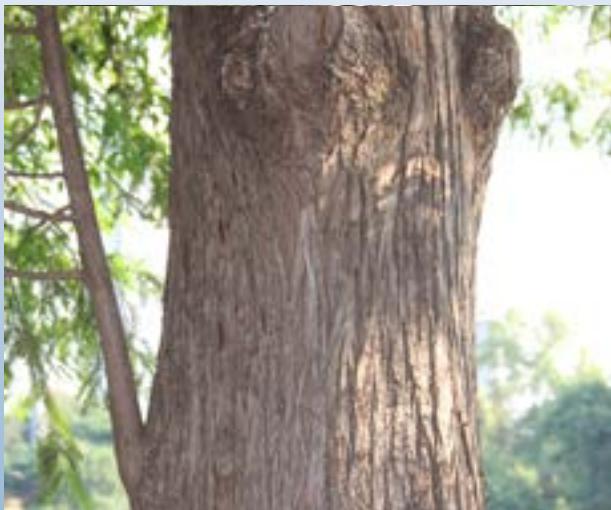

Obl

Cupressaceae (cypress, redwood)

Taxodium distichum
bald cypress

Texas Native

Characteristics:

- Tree: up to 50 m tall, rounded top, tapering trunk (buttressed), produces “knees” from roots (for starch storage), reddish-brown to gray scaly/fibrous ridged bark
- Leaves: deciduous (dull orange-brown in Autumn), alternate, flat, 2-ranked and feathery linear, 1-1.5 cm long
- Flowers: panicle 10-12 cm long of small staminate cones, female cone globose (25 mm across)
- Spring (Seeds in Fall)

Lindera benzoin
northern spicebush

Lindera benzoin
northern spicebush

Characteristics:

- Shrub: deciduous perennial, aromatic
- Leaves: simple, alternate, entire, obovate, tip somewhat extended, to 14 cm long and 6 cm wide, upper surface dark green, lower surface lighter
- Flower: small, 3-merous, greenish/yellow, appear before leaves
- Fruit: fleshy berries, red, 1 cm oblong, single or in clusters
- Feb.

Saururus cernuus
lizard's tail

Saururus cernuus
lizard's tail

Characteristics:

- Forb: colony-forming upright perennial, to 90 cm tall
- Stem: no leaves below, simple or branched
- Leaves: cauline, cordate-ovate with converging veins, to 15 cm long
- Flowers: to 30 cm long, peduncled, nodding, with crowded white flowers and stamens with long, slender filaments
- May-Aug.

Nelumbo lutea

American lotus, yellow lotus

Nelumbo lutea

American lotus, yellow lotus

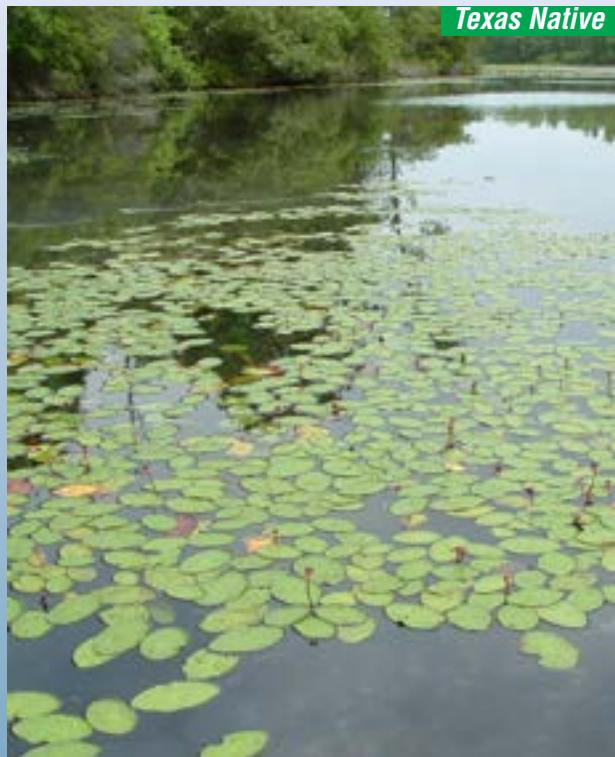

Texas Native

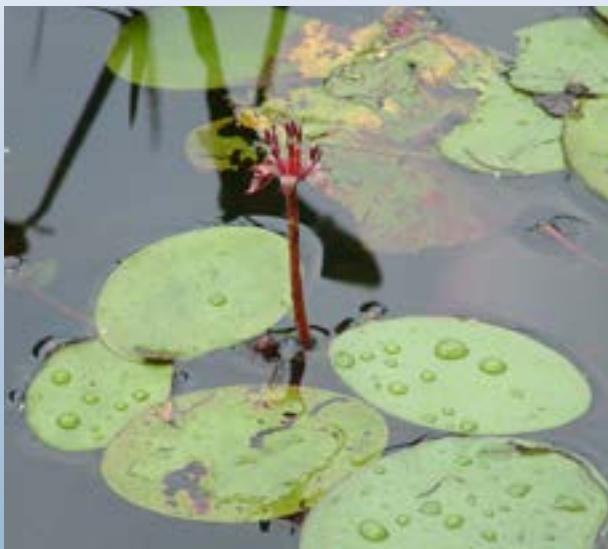

Characteristics:

- Forb: perennial robust floating aquatic, rooted in mud with both thin and banana-shaped rhizomes
- Leaves: round, to 70 cm diameter, floating or held above water, glabrous, petioles to 1 m, peltate, not notched
- Flowers: solitary, large (to 25 cm wide), held above water on long peduncles, petals large and many, yellowish, stamens numerous and spirally arranged, pistils numerous sunken in pits in flat upper surface, inverted-conical, erect receptacle becoming dry and hard and brown
- Fruits: acorn-like, hard 1 seeded (1 cm diameter)
- June-Sept.

Brasenia schreberi
water shield***Brasenia schreberi***
water shield

Texas Native

**Characteristics:**

- Forb: perennial, roots and stem slender
- Leaves: simple, alternate, peltate to 10 cm alternate, floating, oval, rounded ends, entire, thick, upper smooth, lower very slimy and purple, leaf stalk curly and slimy
- Flowers: small, 5-6 petals axillary, dull purple
- April-May

Obl

Nymphaeaceae (water-lily)

Nuphar lutea (Nuphar advena)

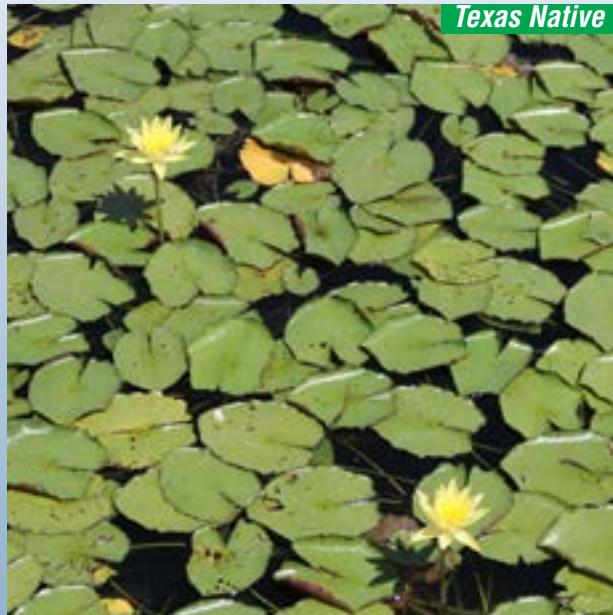

yellow cow-lily, spatter dock

Obl

Nymphaeaceae (water-lily)

Nuphar lutea (Nuphar advena)

yellow cow-lily, spatter dock

Characteristics:

- Forb: perennial floating aquatic, cylindrical rhizomes
- Leaves: spirally arranged, emerging from long petioles, floating or emergent and erect, deep sinus at base, broadly ovate, to 30 cm long
- Flowers: green to yellow, 25 mm across, small petals numerous and thin, 6 thick sepals wrap around flower
- Fruit: ovoid
- Similar plants: *Nymphaea* spp., not showy like water lily
- Mar.-Oct.

Obl

Nymphaeaceae (water-lily)

Nymphaea odorata

white water-lily, fragrant water-lily

Obl

Nymphaeaceae (water-lily)

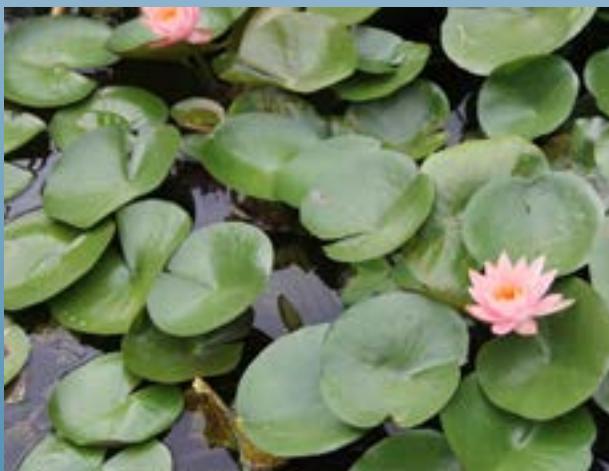

Nymphaea odorata

white water-lily, fragrant water-lily

Characteristics:

- Forb: floating aquatic, stout elongate rhizome
- Leaves: floating, round, 9-25 cm wide, narrow deep sinus, subpeltate, green above and purple/red below, margin wrinkled
- Flowers: fragrant and large, sepals dark on back, petals white or rose and numerous (>25) and long (4.5-9 cm)
- Similar plants: *N. mexicana** has yellow petals; *N. elegans** has blue petals
- May-Sept.

Cabomba caroliniana
fanwort***Cabomba caroliniana***
fanwort**Characteristics:**

- Forb: delicate submerged aquatic rhizomatous perennial, tissue with air chambers
- Stems: slender, branched to 2 m
- Leaves: polymorphic, few peltate alternate small (1-3 cm long) floating leaves, submerged leaves fan-shaped much palmately thinly dissected & opposite (3 cm long & 6 cm wide)
- Flowers: axillary, solitary on thick peduncles, 3-merous, 3 sepals and 3 similar petals, yellow nectar-bearing auricles, carpels free
- Fruits: 3-seeded
- Apr.-July

Ceratophyllum demersum
coontail, hornwort**Ceratophyllum demersum**
coontail, hornwort**Characteristics:**

- Forb: perennial, near surface submerged aquatic, bushy-branched, rootless
- Leaves: 5-12 whorled, sessile, dichotomously forked 1-3 times (palmate-looking), 4-5 visible teeth on one side, 1-3 cm long
- Flower: no perianth, minute involucral bracts visible
- Similar plants: *Myriophyllum brasiliense*, *M. pinnatum*, *M. spicatum*, *Cabomba caroliniana*
- May - Sept.

Aquilegia canadensis
wild columbine

Aquilegia canadensis
wild columbine

Characteristics:

- Forb: perennial, 20-80 cm tall
- Leaves: basal and alternate along stem, palmate 2-3, fan-shaped leaflet
- Flowers: long pediceled, solitary, terminal, nodding, red base, yellow tip, 2-5 cm long, conspicuous 5 basal spurs
- Mar. - May

Ranunculus sceleratus

celery-leaf butter-cup, cursed crow's foot

Ranunculus sceleratus

celery-leaf butter-cup, cursed crow's foot

**Characteristics:**

- Forb: erect palustrine/aquatic short-lived perennial, to 1 m, profusely branching, hollow stems, glabrous throughout
- Leaves: simple, alternate, reniform, dilated leaf base, to 6 cm long, 10 cm wide, basal petioles up to 25 cm, deeply 3-parted/divided and then lobed, cordate at base, rounded at apex
- Flowers: pedicels to 2 cm long, 5 greenish/yellow sepals and 5 light yellow petals up to 1.5 cm in diameter, green cone in middle of flower, seeds in prominent cylindrical heads
- Mar.-Sept.

Platanus occidentalis

American sycamore

Platanus occidentalis

American sycamore

**Characteristics:**

- Tree: deciduous, broad-head, to 50 m tall, conspicuously smooth flaky bark, mottled white trunk
- Leaves: simple, alternate, large and broadly ovate-reniform (35 cm long), shallowly palmately lobed (pointed at tips) or coarsely toothed, truncate base, long petioled, buds completely sheathed by hollow petiole base, pubescent in youth, stipules large and conspicuous,
- Flowers: unisexual in long peduncled spherical heads, sepals and petals minute
- Fruits: in dangling ball-like heads
- Similar plants: *P. mexicana* (Mexican sycamore) has more conspicuously silvery pubescent leaves, overall tree appearance droopier
- Late March-Early April

Boehmeria cylindrica
false nettle***Boehmeria cylindrica***
false nettle**Characteristics:**

- Forb: perennial, erect to 1.2 m tall, not stinging hairs
- Leaves: simple, usually opposite, oblong lanceolate to 15 cm long, serrate, 3-nerved from the base, long petioled, stipules distinct
- Flowers: obscure greenish/brown spike-like clusters in axils
- June-Oct.

Quercus stellata

Delta post oak

Quercus stellata

Delta post oak

Texas Native

Characteristics:

- Tree: medium-sized
- Leaves: alternate, simple, deciduous, thin, blades variable, to 12 cm long and 8 cm wide, obovate, usually 2-4 pairs of lateral rounded lobes (often cross-looking), upper pair often larger, basally narrow, no needle on end of lobes (white oak), lower surface somewhat gray with sparse stellate hairs, upper surface glossy green
- Flowers: pistillate catkins, acorns 2 cm long and no fringe like Bur Oak, spring flowers
- Fruits: appear in the autumn

Obl

Polygonaceae (jointweed, knotweed)

Polygonum densiflorum
dense-flower smartweed

Obl

Polygonaceae (jointweed, knotweed)

Polygonum densiflorum
dense-flower smartweed

Characteristics:

- Forb: erect perennial, branched, swollen nodes, 0.6 to 2 m tall
- Stems: coarse, nodal sheath has no bristles along top edge
- Leaves: simple, alternate, lanceolate, entire
- Flowers: numerous inflorescence spikes clustered, greenish white to whitish-pink
- June-Nov.

Obl

Polygonaceae (jointweed, knotweed)

Polygonum hydropiper

marshpepper smartweed, water smartweed

Obl

Polygonaceae (jointweed, knotweed)

Polygonum hydropiper

marshpepper smartweed, water smartweed

Texas Non-Native

Characteristics:

- Forb: ascending perennial, 0.1 to 1 m tall, swollen nodes, nodal sheath has bristles along top edge, tastes peppery
- Leaves: simple, alternate, entire, lanceolate, often purple
- Flowers: numerous but not clustered, nodding, greenish white, pink at young tips
- June-Dec.

Polygonum hydropiperoides
swamp smartweed

Polygonum hydropiperoides
swamp smartweed

Characteristics:

- Forb: annual or perennial, to 2 m tall, decumbent, roots at swollen nodes, nodal sheath has bristles along top edge, not peppery tasting
- Leaves: simple, alternate, entire, lanceolate, often purple, numerous, short petioles
- Flowers: interrupted inflorescence and usually over 4 cm long, pink to white
- Apr.-Nov.

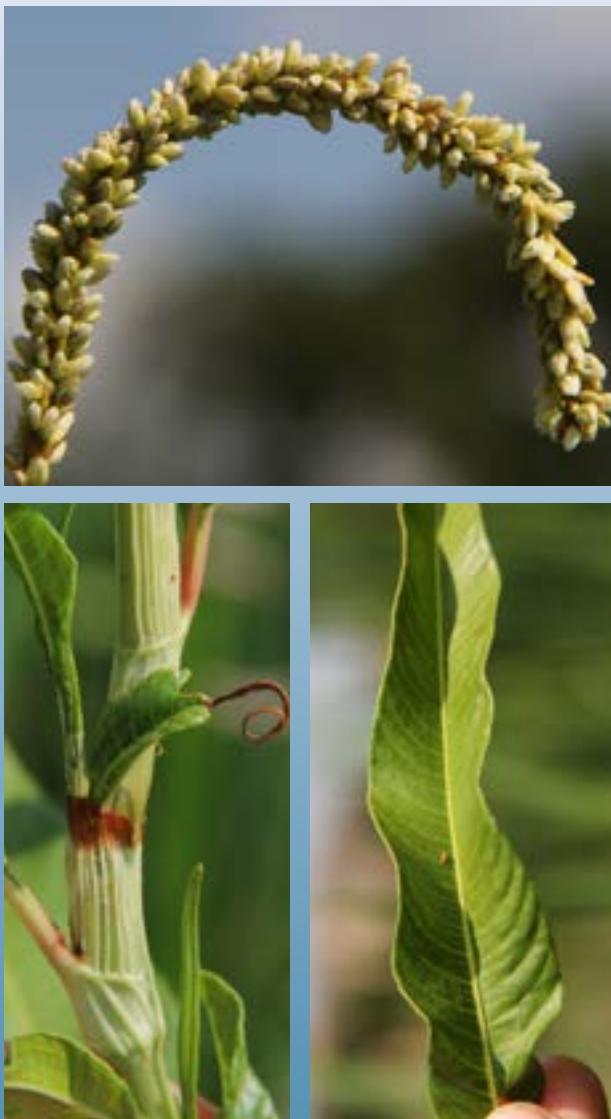

Polygonum lapathifolium
pale smartweed, willow-weed

Characteristics:

- Forb: stout erect annual, to 1.5 m tall, conspicuously swollen nodes, nodal sheath ribbed and has no bristles along top edge
- Leaves: simple, alternate, entire, long and wide, lanceolate, short petioles
- Flowers: dense, drooping, pink-white to white
- Apr.-Dec.

Polygonum lapathifolium
pale smartweed, willow-weed

Rumex crispus

curly dock

Rumex crispus

curly dock

Characteristics:

- Forb: introduced coarse perennial
- Stems: stout, thick joints, erect, no branches, 50-150 cm tall, deep taproot, dark bluish green
- Leaves: simple, alternate, lower elliptical to oblong-lanceolate (more narrow than *R. pulcher*), extremely undulate or crinkled on margin, long-petioled, upper smaller, cordate or obtuse at base
- Flowers: 6 parted, multiple elongate wandlike branches with few leaves, flower whorls dense, pedicels longer than flowers, greenish
- Similar plants: *R. pulcher*
- Apr.-Sept.

Rumex pulcher
fiddle dock

Rumex pulcher
fiddle dock

Characteristics:

- Forb: perennial herb, erect, 50-80 cm tall, thick joints
- Leaves: simple, alternate, basal wide, long-petioled, 3-15 cm long, cordate at base, somewhat wavy but flatter than *R. crispus*, often pubescent beneath
- Flowers: 6 parted, pedicels very divergent, remote whorls with some bracteal leaves, pedicels not longer than fruit, greenish
- Similar plants: *R. crispus* (more densely flowered)
- May

Hibiscus laevis

Halberd-leaf rosemallow or hibiscus

Hibiscus laevis

Halberd-leaf rosemallow or hibiscus

**Characteristics:**

- Forb: erect perennial to 2.5 m
- Leaves: simple, arrowhead-shaped with basal lobes turned outward (hastate)
- Flower: pink or whitish with purple-red blotch at base (maroon center), 5-8 cm long, capsules glabrous
- May-Nov.

Salix nigra
black willow

Characteristics:

- Tree: to 20 m tall, often multi-trunked, flaky dark bark
- Leaves: simple, alternate, close teeth towards middle, stipulate (semicordate), petioles 4-10 mm, blades linear to narrowly lanceolate (5-15 cm long & 5-15 mm wide), tapering to a point at tip and wedge at base, often sickle-shaped, deep green on both surfaces
- Flowers: catkins (aments) long (2-8 cm), slender-cylindric, staminate and pistillate on separate plants (dioecious)
- Seeds: borne on silky hairs
- Mar.-Apr.

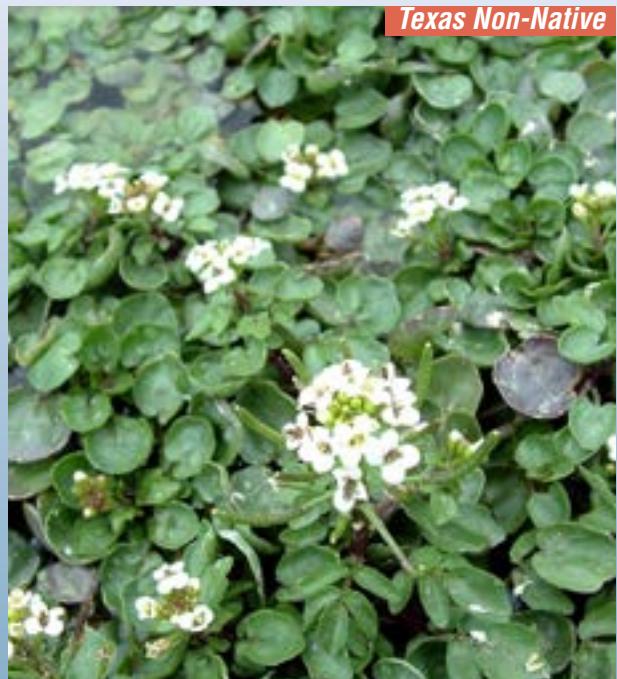

Salix nigra
black willow

Obl

Brassicaceae (Cruciferae, mustard)

Nasturtium officinale (Rorippa nasturtium-aquaticum)
true water-cress

Texas Non-Native

Obl

Brassicaceae (Cruciferae, mustard)

Nasturtium officinale (Rorippa nasturtium-aquaticum)
true water-cress

Characteristics:

- Forb: introduced aquatic perennial
- Stems: glabrous and floating, creeping, or ascending, rooting at nodes
- Leaves: alternate, pinnately compound with 3-9 segments, leaflets ovate, bluntly toothed, terminal leaflet larger, somewhat fleshy
- Flowers: 4 petals white, 3-4 mm long
- Fruit: pedicels with 2 curved siliques fruits 1-2 cm long, plump round seeds
- Mar.-July

Obl

Primulaceae (water pimpernel, brookweed)

Samolus parviflorus
water pimpernel, brookweed

Obl

Primulaceae (water pimpernel, brookweed)

Samolus parviflorus
water pimpernel, brookweed

Characteristics:

- Forb: perennial, succulent, glaborous
- Stem: simple or diffuse above leafy rosette to 60 cm (usually smaller)
- Leaves: simple, alternate, obovate-spatulate (to 15 cm long & 4 cm wide), rounded at apex, entire, alternate along stem, sessile or winged petiole, submerged growth rosette forms a short column
- Flowers: on wiry pedicels, perfect 5-merous, white, small corolla 2-3 mm
- Mar.-Sept.

Amorpha fruticosa
false indigo bush

Characteristics:

- Shrub: widespread perennial, 2-3 m
- Leaves: deciduous, alternate, once pinnate (terminal leaflet), 10-20 cm long, petioles 2-3 cm, 11-35 elliptic leaflets velvety on lower surface veins, margins entire and parallel, abruptly rounder at both ends with notch at tip
- Flower: racemes solitary or cluster of 2-4, small, with only one petal and long stamens, crowded in narrow, spikelike clusters at the ends of branchlets
- Fruit: bean pod with blisterlike glands
- Similar plants: *Sesbania drummondii*, *S. herbacea*
- April - Aug.

Amorpha fruticosa
false indigo bush

Sesbania drummondii
rattle bush

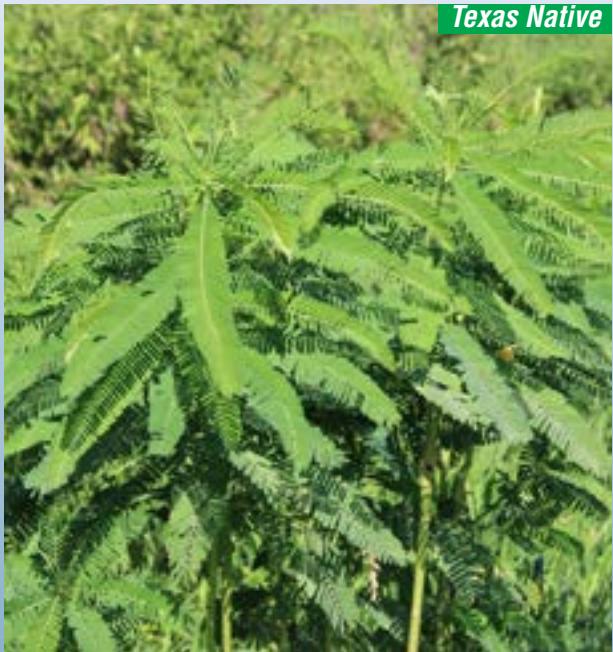

Sesbania drummondii
rattle bush

Characteristics:

- Shrub: lowest part perennial, 0.4-3 m tall, bark smooth & green-light brown,
- Leaves: deciduous, alternate, once pinnate, 10-20 cm long, paired leaflets (20-50) openly spaced and no terminal leaflet (15-35 mm long)
- Flowers: 13-16 mm long, yellow with red lines, peduncle 1-5 cm long
- Fruit: pod square 5-6 cm long, 4-winged, constricted between seeds, tapering to a beak, rattling when dry
- June-Sept.

Sesbania herbacea (S. exaltata)
hemp Sesbania

Characteristics:

- Shrub: robust annual, 0.7-4 m tall, few wide spreading or no branches
- Leaves: deciduous, alternate, once pinnate, 10-30 cm long, paired leaflets (up to 70), 1-3 cm long & 2-6 mm broad, short petioles
- Flowers: peduncle 2-4 cm, yellow flowers 11-16 mm long with beak
- Fruits: narrowly linear, beanlike, not winged, up to 30 beans per pod (*S. vesicaria* has only two seeds)
- Aug.-Oct.

Sesbania exaltata, now S. herbacea
hemp Sesbania

Myriophyllum aquaticum (M. brasiliense)
parrot-feather

Myriophyllum aquaticum (M. brasiliense)
parrot-feather

Characteristics:

- Forb: creeping in or near water, freely branching, exotic (Brazil)
- Leaves: whorled, pinnately divided in threadlike segments (>20), segments 2-5 cm long, upper leaves often yellow
- Flowers: axillary, rarely seen
- Similar plants: *M. heterophyllum*, *M. pinnatum*, *M. verticillatum*
- Mar.-May

Myriophyllum heterophyllum
variable water-milfoil***Myriophyllum heterophyllum***
variable water-milfoil**Characteristics:**

- Forb: submerged matted perennial
- Stems: rather stout
- Leaves: whorled in fours or sixes, leaves 2-5 cm long with 7-10 leaflets; emersed leaves firm, lanceolate, to 3 cm long and 1 cm wide
- Flowers: whorls of 4-6, bracteoles serrate, petals acute and 1.5-3mm long
- Fruit: minutely papillose, beaked
- Similar plants: *M. spicatum* (Eurasian milfoil), *Ceratophyllum demersum*
- Apr.-Aug.

*M. heterophyllum* strand*M. spicatum* strand

Myriophyllum spicatum

Eurasian water-milfoil

Myriophyllum spicatum

Eurasian water-milfoil

**Characteristics:**

- Forb: rhizomatous, submerged matted
- Stems: reddish when drying, exotic
- Leaves: whorled (>1 cm apart), 3-5 segments, divided into threadlike segments (>24), segments <2.5 cm long
- Flowers: in axillary whorls, petals reddish
- Fruit: 4 lobed
- Similar plants: *M. heterophyllum* (variable milfoil), OBL, is softer, has sparse leaflets with base leaflets much longer
- Apr.-Sept.

*M. spicatum* leaf*M. heterophyllum* leaf

Ammannia coccinea
toothcup, purple Ammannia***Ammannia coccinea***
toothcup, purple Ammannia**Characteristics:**

- Forb: stout, to 50 cm tall, ascending
- Leaves: simple, opposite, linear, cordate clasping (flares at base), acute
- Stem: branched and spongy below, glabrous
- Flowers: whorl of pink/purple 4-petaled flowers
- Fruit: reddish, whorled in axils of leaves (usually 2 flowers per axil in this species)
- Apr.–Nov.

Obl

Lythraceae (loosestrife)

Lythrum californicum (Lythrum alatum)
California loosestrife, winged loosestrife

Characteristics:

- Forb: upright much branched perennial to 1.5 m (usually smaller), creeping woody rootstock, pale green glabrous 4-angled stem
- Leaves: simple, alternate, sessile, firm, narrowly linear to linear-oblong, to 3 cm long, sharp at tip, rounded at base, (wing = ridge below leaf)
- Flowers: leafy but linear and smaller, axillary, calyx tube cylindric 5-7 mm long, bright purple, 6 obovate petals, extended stamens past round stigma
- May-Aug.

Obl

Lythraceae (loosestrife)

Lythrum californicum (Lythrum alatum)
California loosestrife, winged loosestrife

Lythrum ovalifolium
stream loosestrife

Lythrum ovalifolium
stream loosestrife

Characteristics:

- Forb: uncommon endemic, erect to decumbent perennial to 35 cm high
- Stem: 4-angled & much branched from base
- Leaves: simple, alternate, broadly elliptic, rounded at apex, abruptly contracted at base, to 25 mm long
- Flowers: leafy but smaller, axillary, calyx tube 5-6 mm long, 6 petals obovate, lavender/light purple, 3-4.5 mm long, yellow anthers in throat
- Apr.-June

Ludwigia octovalvis

Mexican seedbox, shrubby water primrose

Ludwigia octovalvis

Mexican seedbox, shrubby water primrose

Texas Native

Dried seed capsule

**Characteristics:**

- Forb: well-branched shrubby herb to 1 m tall, square stem
- Leaves: simple, alternate, lanceolate, 3-14.5 cm long, petiole 0-1 cm
- Flower: axillary, 4 sepals, petals yellow, trumpet shaped tubular ovaries, seed capsule long (1.7-4.5 cm) and thin with sepals stuck at the end, 8 angled, turning red in fall
- Jul.-Oct.

Ludwigia palustris

marsh seedbox, creeping purslane

Ludwigia palustris

marsh seedbox, creeping purslane

Texas Native**Characteristics:**

- Forb: herb creeping in mud, rooting at nodes, reddish tinged
- Leaves: simple, opposite, elliptic-lanceolate, acute, glabrous, entire, short petioles 2-10 mm (*L. repens* similar but with longer petioles)
- Flower: axillary, sessile, petals absent, 4 visible green sepals forming a small green flower bud, capsule 2-8 mm with broad green bands at corners, pedicils absent
- Similar plants: *L. peploids*, *L. repens*
- June-Oct.

Ludwigia peploides

water primrose, floating seedbox

Ludwigia peploides

water primrose, floating seedbox

**Characteristics:**

- Forb: creeping or floating herb, glabrous red stem
- Leaves: simple, alternate, oblong, entire, petioles 2-40 mm
- Flower: showy yellow corollas, sepals and petals 5, capsules 10-40 mm
- Similar plants: *L. palustris*, *L. repens*, *L. octovalvis*
- May-Oct.

Ludwigia repens
round leaf seedbox

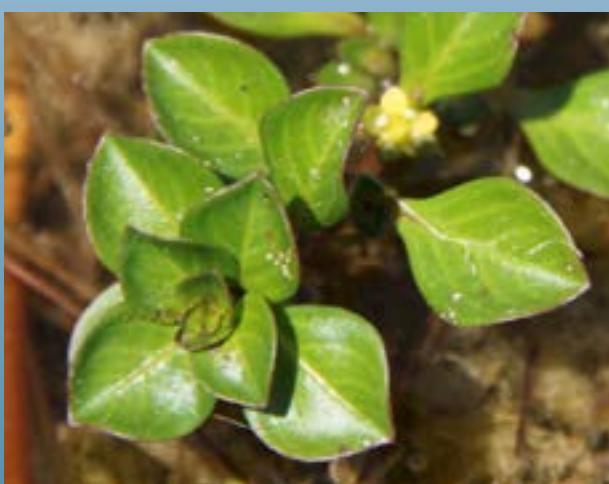

Ludwigia repens
round leaf seedbox

Characteristics:

- Forb: creeping or floating herb, glabrous, rooting at nodes
- Leaves: simple, opposite, subrotund or narrowly elliptic, entire, petioles 2-40 mm
- Flower: small yellow petals falling off soon, pedicils present, sepals 4, capsules 3.3-7.5 mm
- Similar plants: *L. palustris* (is shorter and has rounded leaves)
- July - Sept.

Ilex decidua

deciduous holly, possum haw

Ilex decidua

deciduous holly, possum haw

Texas Native

**Characteristics:**

- Shrub: up to 10 m, smooth twigs pale silver/gray with lateral short leafy spurs
- Leaves: deciduous, simple, alternate or fascicled on spur ends, paddle-shaped, petiolate, few obscure rounded teeth at tip with minute glands, puberulent above, glabrous and pale below
- Flower: small, white, at spur tips with leaves, dioecious
- Fruits: globose drupe, bright red/orange crowned by persistent stigma, persistent through winter
- Similar plants: *Ilex vomitoria*
- Mar.-May

Acer negundo
box elder**Acer negundo**
box elder**Characteristics:**

- Tree: often multi-trunk
- Twigs: green or purplish for 3 years
- Leaves: pinnate (usually 3, sometimes 5 leaflets), opposite, ragged large teeth
- Flowers: greenish appearing just before leaves (Feb.)
- Fruit: samaras
- Similar plants: the 3 leaflets look like poison ivy, but box elder has opposite leaves and poison ivy has alternate leaves

Cicuta maculata

spotted water-hemlock, beaver poison

Cicuta maculata

spotted water-hemlock, beaver poison

Texas Native

**Characteristics:**

- Forb: native perennial, erect, glabrous, waxy coating, to 0.6-1.8 m tall, roots fleshy, spotted purple when blooming
- Leaves: alternate, 1-3X pinnate, ovate to 30 cm long, lanceolate serrate acute leaflets 2-12 cm long
- Flower: compound umbels on long peduncles, 7-15 cm across, white, rays unequal
- Fruits: oval, corky, ribbed
- May-Sept.

Conium maculatum
poison hemlock

Conium maculatum
poison hemlock

Characteristics:

- Forb: introduced poisonous biennial, erect, glabrous, to 0.5-3 m tall, unpleasant odor, root carrot-like
- Stem: purplish-spotted, hollow, much branched
- Leaves: opposite, broadly ovate, 3X pinnate, 15-30 cm long, ultimate divisions pinnately incised
- Flower: inflorescence a compound umbel, 5-8 cm across, terminal or axillary, white,
- Fruit: broadly ovoid, glabrous, ribbed
- May-June

Hydrocotyle verticillata

water-pennywort

Hydrocotyle verticillata

water-pennywort

Characteristics:

- Forb: creeping, floating, submerged perennial
- Leaves: shiny, round, peltate, to 6 cm diameter, shallow lobes on margins, petioles to 35 cm (usually shorter)
- Flower: spike with 2-7 small flowered whorls
- Similar plants: *H. umbellata*, Big Pennywort, Obl, blades without lobes to 7.5 cm, inflorescence a simple uninterrupted umbel; *H. ranunculoides*, Floating Pennywort, OBL, leaves not peltate & to 8 cm; *Dichondra recurvata*, Pony Foot, Fac, leaf not peltate, notched, 1-2 flowers with recurved pedicels (in Morning Glory family)
- May-Oct.

Mitreola petiolata (Cynoctonum mitreola)
miterwort, Lax hornpod

Mitreola petiolata (Cynoctonum mitreola)
miterwort, Lax hornpod

Characteristics:

- Forb: lax, glabrous annual to 75 cm tall
- Leaves: simple, opposite, stipulate, ovate-elliptic to elliptic-lanceolate, 2-8 cm long, tapers to short petiole
- Flower: in long peduncles cymes, corolla white-pink tinged, 1.5-2.5 mm long, 5-merous, symmetric
- Fruits: 2-horned
- Similar plants: *M. sessilifolia* has broadly oval, sessile leaves rarely > 2 cm long
- May-Oct.

Physostegia angustifolia

narrow leaf false dragon head, obedient plant

**Characteristics:**

- Forb: perennial, stiffly erect to 2 m, rhizomatous
- Leaves: simple, opposite, mostly sessile, rigid, grayish or pale, narrowly lanceolate, narrowing to a base point, serrate, to 13 cm long
- Flowers: leafy hairy-bracted inflorescence, spikes slender and wand-like to 35 cm, usually solitary with few erect laterals, corolla funnelform with inflated throat, pale to deep purple or whitish with purple spots, 2-lipped (upper erect, lower 3-parted), to 3 cm long, calyx hairy
- Similar plants: rare *P. Corellii* leaves are leathery and oblong elliptic and arranged with pairs at right angles or decussate, corolla lavender-pink
- Apr.-July

Physostegia angustifolia

narrow leaf false dragon head, obedient plant

Teucrium canadense

American germander, wood sage

Teucrium canadense

American germander, wood sage

**Characteristics:**

- Forb: rhizomatous perennial, to 1 m tall
- Stems: erect, square, branching in inflorescence, pubescent
- Leaves: simple, opposite, sharply toothed or serrate, 6-10 cm long & 2-4 cm broad, narrowly elliptic, acute, narrowing and rounded at base, leaf bottom silvery with pubescence, petioles to 15 mm, purple and hairy at attachment
- Flowers: inconspicuously bracteate spikes 20-30 cm long, calyx 5-7 mm, silvery with hairs, corolla 11-16 mm, pale lavender with purple-red lines, missing upper lip like most other mints
- May-July

Phyla lanceolata (Lippia lanceolata)
lance-leaf frog fruit

Characteristics:

- Forb: perennial, procumbent, stems to 60 cm, simple or loosely branched, rooting at nodes, square hairy stem
- Leaves: simple, opposite, short to no petioles, blades bright-green on both sides, oblong-lanceolate 18-75 mm long, acute, sharply serrate from tip to past middle (usually >4 teeth per side), cuneate base, conspicuous venation
- Flowers: surpassing leaves on peduncles 4-9 mm long, heads globose to cylindric and elongating with age, bractlets closely imbricate and acute, pale-blue, purplish or white
- Similar plants: *P. incisa*, Fac, has teeth only in upper third of leaf, usually 2 on each side; *P. strigulosa*, Diamond-Leaf Frogfruit, FacW, leaf blades more triangular and folded like a fan, teeth do not extend below the widest part of the leaf, rare)
- May-Oct.

Phyla lanceolata (Lippia lanceolata)
lance-leaf frog fruit

Obl

Callitrichaceae (water-starwort)

Callitricha heterophylla

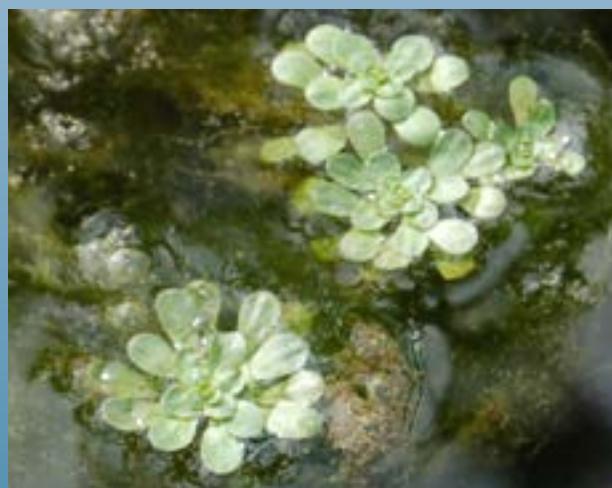

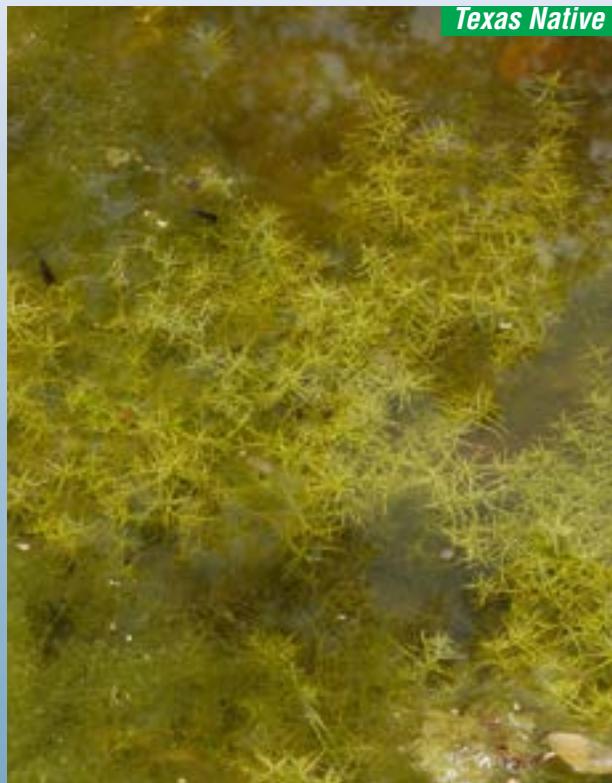

large water starwort

Obl

Callitrichaceae (water-starwort)

Callitricha heterophylla

large water starwort

Characteristics:

- Forb: polymorphic, spreading
- Leaves: simple, bright green, often two leaf types, obovate rosettes on floating tops, linear opposite below
- Flower: subtended by 2 small bracts
- Fruits: small heart-shaped in axils, 1-2.5 mm
- Feb.-Sept.

Fraxinus pennsylvanica
green ash***Fraxinus pennsylvanica***
green ash**Texas Native****Characteristics:**

- Tree: to 20 m tall
- Leaves: opposite to 15 cm, pinnate, 5-9 leaflets, elliptic-oblong to lanceolate, acute, margins entire, usually glabrous, bright green above, pale below, petioles to 1 cm
- Flower: compact panicle of winged samaras, each 3-7.5 cm long
- Similar plants: *F. texensis*, Texas Ash, usually has 5 leaflets, more ovate or rounded in shape
- Feb.-Apr.

Bacopa monnieri
coastal water hyssop**Bacopa monnieri**
coastal water hyssop**Characteristics:**

- Forb: creeping succulent, mat forming on mud flats
- Leaves: simple, opposite, spatulate, to 20 mm long, entire
- Flowers: solitary in nodes, 5 white to pale blue petals (8-10 mm long), pedicels 25 mm long
- Similar plants: *B. rotundiflora*, Disk Water Hyssop, OBL, leaves suborbicular to 35 mm, palmately nerved, 2-4 flowers per upper node, rare
- Apr. - Sept.

Bacopa rotundiflora
disk water hyssop**Bacopa rotundiflora**
disk water hyssop**Characteristics:**

- Forb: creeping succulent, mat forming on mud flats, elongate and pubescent branches
- Leaves: obovate, with clasping bases, distinctly palmately nerved
- Flowers: white, 5 petaled, slender pedicel 2-3 times as long as calyx
- Similar plants: *B. monnierii* has smaller, more elongate leaves
- May-Nov.

Veronica anagallis-aquatica
water speedwell**Veronica anagallis-aquatica**
water speedwell**Characteristics:**

- Forb: introduced perennial to 1 m tall, glabrous throughout
- Stems: shortly creeping and rooting at base then ascending erect, purple stem base
- Leaves: simple, opposite, sessile, rounded to clasping bases, oblanceolate, acute, serrate to dentate, axillary shoots (back-up leaves)
- Flowers: many in small-bracted axillary racemes, pedicels 6-8 cm, sepals 4 lanceolate, corolla 5-6 mm wide, pale lavender to blue, lobes with violet lines
- Fruit: an orbicular capsule
- Mar.-Oct.

Veronica peregrina

purslane or little speedwell, necklace weed

Veronica peregrina

purslane or little speedwell, necklace weed

**Characteristics:**

- Forb: erect annual, to 30 cm tall, spreading, glabrous throughout or with glandtipped hairs
- Leaves: simple, opposite, sessile, linear-oblong, obtuse, usually 2-3 toothed on each side, very short petiole on lower leaves
- Flowers: in terminal raceme spikes, pedicels 1-2 mm, sepals 4, corolla white 2-2.5 mm wide
- Fruits: heart shaped
- Feb.-June

Obl

Acanthaceae (*acanthus, petunia*)

Justicia americana
water-willow

Obl

Acanthaceae (*acanthus, petunia*)

Justicia americana
water-willow

Characteristics:

- Forb: rhizomatous perennial, colonial, erect to 1 m, glabrous
- Stem: grooved angled purplish, stem often rooted basally
- Leaves: simple, opposite, lanceolate, fine teeth, sessile to short petiolate, white line around stem where leaf attaches
- Flower: clusters at ends of 15 cm peduncles, calyx 5-parted, corolla violet-white, tube shorter than lips, lower lip with purple dots
- Similar plants: wild petunia
- Apr.-Sept.

Utricularia gibba
humped bladderwort

Texas Native

Utricularia gibba
humped bladderwort

Characteristics:

- Forb: insectivorous floating aquatic perennial, delicate and entangled
- Stems: small dark bladderlike traps along stems/leaves
- Leaves: alternate, thread-like, dichotomously branched in 2 filiform segments
- Flowers: 1-3, small corolla two lipped, spurred, yellow
- Fruits: seeds smooth and winged
- May-Oct.

Lobelia cardinalis
cardinal flower

Lobelia cardinalis
cardinal flower

Characteristics:

- Forb: perennial by short basal offshoots, to 2 m tall
- Leaves: simple, alternate, many, thin, glabrous or hairy, lanceolate, irregularly serrate
- Flower: raceme terminal to 50 cm, deep red corolla that splits, foliaceous, poisonous
- May-Dec.

Cephalanthus occidentalis
buttonbush***Cephalanthus occidentalis***
buttonbush**Characteristics:**

- Forb: bushy shrub 1-15 m tall
- Leaves: simple, opposite or in whorls of 3, short petioles, elliptic-lanceolate, entire, 19 cm long, bright above, petioles 3 cm, prominent lateral veins
- Flower: many individuals, button-like on long peduncles to 10 cm, heads globose, creamy white, 15 mm diameter, anthers extend giving halo effect
- June-Sept.

Galium tinctorium

stiff marsh bedstraw, dye bedstraw

Galium tinctorium

stiff marsh bedstraw, dye bedstraw

**Characteristics:**

- Forb: stiff perennial to 30 cm, smooth, not sticky
- Leaves: whorled, mostly in 5-6's, variable (3-4 infrequent), broadly oblanceolate, entire
- Flowers: small, terminal cymes 2-3 flowers on long pedicels divided into 3 divergent peduncles, white, 3-lobed
- Fruits: 2 round seeds together, blue-black, smooth (used as dye)
- Similar plants: *Galium aparine*
- Mar.-Aug.

Sambucus canadensis

American elder

Sambucus canadensis

American elder

Texas Native

**Characteristics:**

- Shrub: tall perennial to 4 m, becomes woody when tall, pith white in stems
- Leaves: opposite, pinnate, 5-7 weak leaflets, broadly lanceolate, acuminate, sharply toothed, purplish young petioles
- Flowers: small (5 mm wide) in corymbs, corollas creamy white
- Fruit: a 3-stoned purple-black berry-like drupe, 4-6 mm diameter
- May-July

Acmella oppositifolia var. *repens* (*Spilanthes americana*)
water daisy, creeping spotflower

Characteristics:

- Forb: perennial, rhizomatous creeping herb, rooting at nodes; found along banks of Colorado River below Longhorn Dam
- Branches: flowering branches ascending
- Leaves: opposite, petioled, ovate, rhombic to deltoid, 2-4 cm long, serrate
- Flowers: heads solitary on axillary peduncles 5-15 cm long, phyllaries linear, in 2 series, ray flowers few, yellow ray and disk; disk receptacle elongate and conical
- May-Nov.

Acmella oppositifolia var. *repens* (*Spilanthes americana*)
water daisy, creeping spotflower

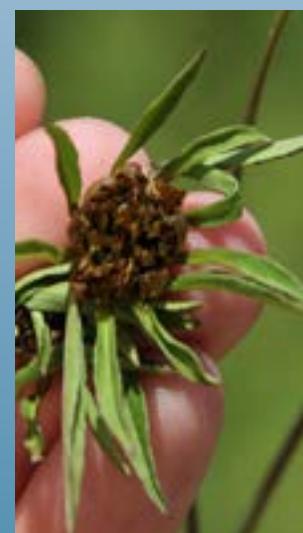

Bidens frondosa
devil's beggar-ticks

Characteristics:

- Forb: annual, 0.2-1.2 m tall
- Leaves: petioles 10-60 mm long, opposite, palmately compound, leaflets lanceolate, serrate, terminal leaflet petiolulate
- Flower: heads 1 cm broad, long, phyllaries conspicuously ciliate, ray flowers absent, corollas orange-yellow, 7-10 bracts below flower
- Sept.-Oct.

Bidens frondosa
devil's beggar-ticks

Conoclinium (Eupatorium) coelestinum
mistflower

Characteristics:

- Forb: perennial, rhizomatous
- Stems: weak to 2 m
- Leaves: simple, opposite, deltoid, long petioles (3-20 mm), pubescent, blunt toothed
- Flower: numerous in cormb-like clusters, light blue/purple
- Similar plants: *E. serotinum*, White Boneset, Fac-, has white flowers and is also found in moist areas
- Summer-Fall

Conoclinium (Eupatorium) coelestinum
mistflower

Eclipta alba
yerba de tajo, pipeplant

Eclipta alba
yerba de tajo, pipeplant

Texas Native

Characteristics:

- Forb: introduced annual, low, pubescent, freely branching
- Stem: pale purple with appressed hairs
- Leaves: simple, opposite, short petioles to sessile, narrowly elliptic, dark green, usually entire
- Flower: small solitary terminal heads, inconspicuous, bell shaped involucre, numerous white ray flowers, white disk
- Fruit: with star-shaped bract
- Summer-Fall

Helenium autumnale

common sneezeweed, swamp sunflower

Helenium autumnale

common sneezeweed, swamp sunflower

**Characteristics:**

- Forb: erect perennial, 30 cm-1 m, branched above, winged stem
- Leaves: simple, alternate, 3-15cm, linear-elliptic, usually serrated
- Flower: on 3-6 cm peduncles, disk yellow globose, rays yellow
- Similar plants: *H. amarum*, FACU, is shorter and has linear leaves
- Sept.-Oct.

Helenium elegans
elegant sneezeweed

Helenium elegans
elegant sneezeweed

Characteristics:

- Forb: erect perennial, 20-120 cm tall, found over limestone stream bottom and seeps
- Leaves: simple, entire, narrowly elliptic to lanceolate or linear, upper stem leaves linear and reduced
- Flowers: disk corollas with reddish brown or yellowish brown lobes, ray flowers yellow with ligules, heads on long peduncled well above the foliage
- May-July

Iva annua
marsh elder, sumpweed

Iva annua
marsh elder, sumpweed

Characteristics:

- Forb: annual 0.4-2 m tall, aromatic
- Stems: hairy
- Leaves: simple, opposite, ovate-lanceolate, 3-15 cm long, 20-70 mm wide, serrate, (lobed later), 3 veins from bottom of leaf, reduced upward to bracts
- Flower: inflorescence spike-like, heads sessile in axils of bracts, phyllaries 3-4 distinct, green
- Similar plants: *I. angustifolia*, narrow-leaf sumpweed, has smaller lanceolate leaves, 2-5 cm long, 2-12 mm wide, alternate above, phyllaries united into cup with toothed margin
- Fall

Mikania scandens
climbing hempweed

Mikania scandens
climbing hempweed

Characteristics:

- Vine: perennial climbing vine (only vine in Asteraceae), smells good
- Stems: purple, no tendrils
- Leaves: opposite, petioled, elongate deltoid and heart shaped, undulated margins or some large teeth
- Flowers: acute purple fuzzy heads at ends of branches, ray flowers absent, disk corollas whitish, pappus persistent of numerous bristles
- Aug.-Nov.

Obl

Asteraceae (sunflower)

Pluchea ordorata (P. purpurascens)
saltmarsh camphor-weed, purple pluchea, fleabane

Obl

Asteraceae (sunflower)

Pluchea ordorata (P. purpurascens)
saltmarsh camphor-weed, purple pluchea, fleabane

Characteristics:

- Forb: common leafy annual, to 1.5 m tall, glabrous below and hairy above
- Leaves: simple, alternate, oblong elliptical 6-15 cm long, variously dentate, sessile, camphor-smelling resin glands, lower surface puberulent
- Flowers: aggregation of heads in panicled cymose clusters (dark spikes), center maturing first and taller, phyllaries resinous, rose-purple
- Summer-Fall

Obl

Asteraceae (sunflower)

Symphyotrichum divaricatum (Aster subulatus)
annual saltmarsh aster

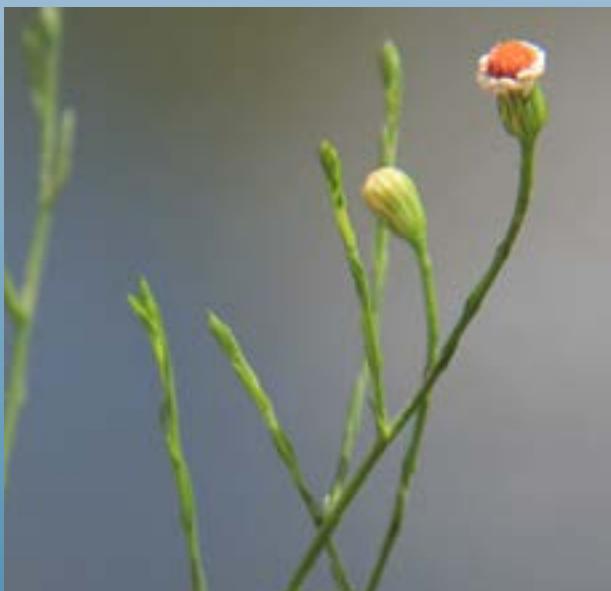

Characteristics:

- Forb: annual, glabrous, much branched
- Culms: 50-130 cm tall
- Leaves: linear 1-10 cm long, shorter up the stem
- Flowers: 10-15 mm wide, usually white to pale blue, purple/violet/pink as well, pointed,
- Similar plants: *A. praealtus*, Willow Aster, FACW, leaves are linear-elliptic, 4-12 cm long & larger lavender flowers
- Aug.-Nov.

Obl

Asteraceae (sunflower)

Symphyotrichum divaricatum (Aster subulatus)
annual saltmarsh aster

Obl

Alismataceae (arrowhead)

Echinodorus berteroii (E. rostratus)
upright burhead

Obl

Alismataceae (arrowhead)

Echinodorus berteroii (E. rostratus)
upright burhead

Characteristics:

- Forb: annual, coarse rigid aquatic emergent to 60 cm exceeding the leaves
- Leaves: broadly ovate to broadly rounded cordate, to 15 cm long, flattened triangle in cross section
- Flower: umbels numerous, branched panicles, white 3-merous corolla (1 cm diameter)
- Fruits: look like burrs, 2-glanded beaked seeds
- Similar plants: *E. cordifolius* is a creeping burhead, *E. parviflorus* is small and delicate (<10 cm)
- May-Oct.

Obl

Alismataceae (arrowhead)

Sagittaria lancifolia
bulltongue arrowhead

Obl

Alismataceae (arrowhead)

Sagittaria lancifolia
bulltongue arrowhead

Characteristics:

- Forb: aquatic perennial with milky juice
- Leaves: erect, ovate to elliptic to narrowly lanceolate, to 40 cm long
- Flowers: scapes branching at lower nodes, as many as 10 whorls, lower 1-4 whorls pistillate, bracts ovate and papillose, fruiting heads to 15 mm in diameter
- May.-Nov.

Sagittaria latifolia

broad-leaf arrowhead, duck potato

Sagittaria latifolia

broad-leaf arrowhead, duck potato

**Characteristics:**

- Forb: aquatic perennial, stoloniferous, milky juice, submersed or emersed
- Leaves: all basal, erect, blades triangular ovate, acute at apex, sagittate (arrowhead shaped), to 25-50 cm long and wide, basal lobes half of body in length, leaves of submerged form no sagittate
- Flowers: scapes angled with as many as 10 whorls of 3 flowers, 3 sepals and white petals, pistillate below and staminate above, bracts ovate and densely papillose
- May.-Aug.

Sagittaria platyphylla
delta arrowhead

Sagittaria platyphylla
delta arrowhead

Characteristics:

- Forb: aquatic perennial, stoloniferous and bulbous, starchy “duck potato”, milky juice, submersed or emersed
- Leaves: all basal, erect, blades ovate to elliptic or lanceolate, unlobed, tapering at both ends, firm, to 18 cm long and 8 cm wide, horizontal vein-looking markings on leaf (“tiger stripes”)
- Flowers: scapes with as many as 8 whorls of 3 flowers, 3 sepals and white petals, pistillate below and staminate above, pedicels to 25 mm, bracts ovate
- Similar plants: *S. graminea*, grass-leaf arrowhead, Obl, has narrow grasslike leaves coming from the base
- Apr.-Oct.

Obl

Hydrocharitaceae (tape grass)

Najas guadalupensis

southern najad, common water-nymph

Obl

Hydrocharitaceae (tape grass)

Najas guadalupensis

southern najad, common water-nymph

Texas Native

Characteristics:

- Forb: slender, submerged, stems to 60 cm long
- Leaves: crowded, subopposite, linear (threadlike), tapered, to 25 mm long, tipped with minute spines, marginal teeth inconspicuous
- Flowers: axillary
- Seeds: distinct in axils, spindle-shaped, crowned with 2-3 stigmas
- Jun.-Sept.

Vallisneria americana

eel-grass, water-celery, tape-grass

Vallisneria americana

eel-grass, water-celery, tape-grass

**Characteristics:**

- Forb: rare submerged stoloniferous aquatic
- Leaves: ribbon-like, clustered at base, long (to 100 cm), to 8-20 mm wide
- Flowers: hydrophily on water surface, males numerous and floating away from spathe with 3- transparent sepals and 1 petal; female flowers solitary in peduncled spathe at water surface with 3 pinkish sepals, 3 ephemeral petals, coiling under water after pollination
- Fruits: cylindric 8-18 cm long
- Apr.-July

Potamogeton nodosus
long-leaf pondweed**Potamogeton nodosus**
long-leaf pondweed**Characteristics:**

- Forb: common aquatic rhizomatous herb, rhizome white and spotted red
- Leaves: both submerged and floating, alternate, linear or elliptic-lanceolate, to 20 cm, petiole 2-13 cm long, acute but not sharp apex, floating leaves leathery, long petioles, broadly elliptic
- Flowers: peduncles thicker than stem, 10-17 whorls of flowers, orbicular
- Apr.-June

Sabal minor
dwarf palmetto

Texas Native

Sabal minor
dwarf palmetto**Characteristics:**

- Tree: 1 m to 6 m tall, stemless or short unbranched trunk
- Leaves: rosette from a single apical bud, long and smooth-petioled, stiff evergreen, glabrous, bluish-green, palmate (fan-like) blades to 150 cm wide, longitudinally pleated toward base, divided over half way into narrowly lanceolate segments
- Flowers: inflorescence a long panicle, its stalk with leafy bracts consisting of closed, tubular basal sheath and grass-like short blade, flowers many, subsessile, very small, with 3-lobed calyx, 3 greenish brown petals, 6 stamens, 1 pistil, ovary superior
- Fruits: globular, black, 6-13 mm in diameter
- June

Arisaema dracontium
green dragon

Characteristics:

- Forb: perennial
- Leaf: usually solitary compound, 25 cm wide on a long, erect 25-50 cm petiole, emerging from the ground, palmate with central leaflet and 2-7 side leaflets on sub-petiole
- Flower: stalk 4-10' topped by a light green saphe and 6" yellow tapering spadix
- Late June-July

Arisaema dracontium
green dragon

Obl

Araceae (Jack in the pulpit)

Colocasia esculenta (Alocasia macrorrhiza)
elephant's ear, taro

Obl

Araceae (Jack in the pulpit)

Colocasia esculenta (Alocasia macrorrhiza)
elephant's ear, taro

Characteristics:

- Forb: large introduced aquatic emergent perennial, large tuber-like corm (Hawaiian Poi)
- Leaves: basal, large peltate (attaches towards center), irregularly ovate (look like elephant's ear), notched at base, upper surface has sheen
- Flower: spathe rolled between blade and tube, yellow, spadix terminated by an appendage
- Spring-Fall

Lemna minor
lesser duck-weed**Lemna minor**
lesser duck-weed**Characteristics:**

- Forb: small free floating aquatic, thallus solitary or in groups, a single root, reproduces by flower or vegetative buds
- Leaves: a single thallus, elliptic-obovate, 2-4 mm long, 1.5-3 mm wide, dark to yellowish green surface with red or purple, low median ridge
- Flower: 2 staminate or 1 pistillate flowers per vegetative spathe
- Similar plants: *Landoltia punctata*
- Summer

Obl

Lemnaceae (duck-weed)

Wolffia columbiana

common wolffia, water-meal

Obl

Lemnaceae (duck-weed)

Wolffia columbiana

common wolffia, water-meal

Texas Native

Characteristics:

- Forb: smallest free floating aquatic, thallus solitary or paired, no roots, reproduces by flowers or budding
- Leaves: a single thallus, 0.1-1.4 mm long, upper surface may be roughened by papillae, thallus globular or pointed in *W. brasiliensis*
- Flowers: inflorescence 1 pistillate and 1 staminate flower
- Similar plants: *Lemna minor*
- Summer

Juncus effusus
soft rush**Juncus effusus**
soft rush**Characteristics:**

- Rush: perennial, rhizomes short and thick
- Culms: round 60-120 cm and hollow, crowded into rounded clump, round, not ribbed
- Leaves: chestnut-brown rounded basal sheaths, bladeless
- Flower: panicles appear from side of culm (only rush to do this), overtopped by round bract
- Spring

Juncus marginatus
grass-leaf rush, inland rush

Juncus marginatus
grass-leaf rush, inland rush

Characteristics:

- Rush: perennial, short-rhizomatous, 15-30 cm tall, swollen stem base
- Leaves: flattened (grass-like), numerous, soft, mostly erect, sheath shorter than internode
- Flower: inflorescence compact, panicles terminal, much branched, many small glomerules of 2-12 flowers each, subtended by only 1 bracteole 6 points surround each seed capsule
- Spring-Summer

Juncus texanus
Texas rush***Juncus texanus***
Texas rush*Texas Native***Characteristics:**

- Rush: slender perennial, rhizomes slender with tubers
- Culms: round (terete) 20-60 cm
- Leaves: few, terete, weak septa, near middle
- Flower: terminal, bract shorter than or only slightly surpassing inflorescence, heads round, remote on short branches, capsules with elongated pointed beaks
- June-July

Small, round tuber at the end of rhizome

Juncus torreyi

Torrey's rush

Juncus torreyi

Torrey's rush

**Characteristics:**

- Rush: perennial, rhizomes slender with tubers
- Culms: round (terete) 30-100 cm
- Leaves: terete (rolled round), strong septa near middle (feel ribs between fingers), 20-24 cm long, 4 mm wide
- Flowers: terminal, terete bract longer than inflorescence, crowded round heads 8-10 mm brownish
- Similar plants: *J. brachycarpus* (smaller)
- June/July-(Oct.)

Carex brittoniana
Britton's sedge

Carex brittoniana
Britton's sedge

Carex reniformis

Carex brittoniana

Characteristics:

- Sedge: tufted perennial, rhizomes black
- Culms: 35-75 cm long, sharply triangular
- Leaves: blades 2.5-5 mm broad, flat shorter tan the culm
- Flower: inflorescence 2.5-5 cm long, 1-2.5 cm broad, 2-5 clumped ovoid burlike spikes, bracts essentially absent
- Similar plants: *C. reniformis*, *Fuirena simplex*
- Mar.-May

Carex cherokeensis

Cherokee sedge

**Carex cherokeensis**

Cherokee sedge

**Characteristics:**

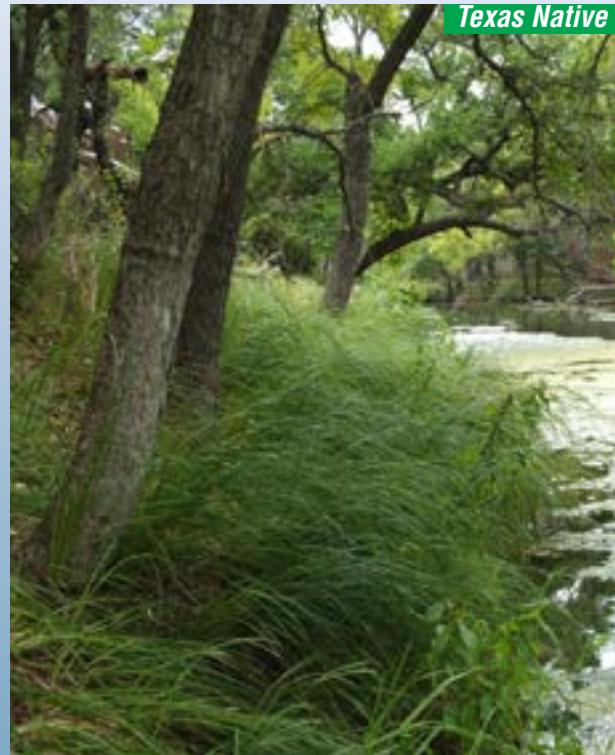

- Sedge: rare tufted perennial, rounded crown, rooted usually in sandy soil
- Stem: typical, triangular
- Leaves: long and narrow, typical sedge “V” in cross section
- Flower: with typical caric spikelet, (male spike arranged over female spike)
- Apr.-Early June

Carex emoryi

Emory's sedge

Carex emoryi

Emory's sedge

**Characteristics:**

- Sedge: very common Caric sedge along Austin stream edges, tufted perennial, rhizomatous
- Culms: 40-100 cm
- Leaves: numerous
- Flower: lower pistillate spikes in clusters of 4-7, often overlapping, staminate spikes above
- Apr.-May

Carex frankii
Frank's sedge**Carex frankii**
Frank's sedge**Characteristics:**

- Sedge: perennial, rhizomatous
- Culms: 20-70 cm tall, basal sheaths brownish
- Leaves: 4-11 mm broad
- Flower: inflorescence 4-6 ascending spikes, terminal spike male and inconspicuous, tan-brown, lowest female spikes on long peduncles (to 15 cm)
- Apr.-June

Carex microdonta
little-tooth sedge**Carex microdonta**
little-tooth sedge**Characteristics:**

- Sedge: very common Caric sedge in wet meadows, small tufted perennial, rhizomatous
- Culms: 9-50 cm
- Leaves: shorter than culm, 2-7 mm broad, leaves curl back
- Flower: spikes 3-5, staminate terminal (usually 1 male and 1 female)
- Similar plants: *C. meadii*
- Mar.-May

Cladium jamaicense

Jamaica sawgrass

Cladium jamaicense

Jamaica sawgrass

Texas Native**Characteristics:**

- Sedge: coarse reed 1-3 m tall
- Stems: triangular
- Leaves: tough with saw-toothed margins, channeled ventrally, long (0.3-1 m)
- Flower: inflorescence 20-80 cm long, 2-6 spikelets terminate many short branches
- Summer

Cyperus acuminatus

pointed/short-point/taper-leaf flatsedge

Cyperus acuminatus

pointed/short-point/taper-leaf flatsedge

Texas Native

**Characteristics:**

- Sedge: tufted perennial
- Culms: slender 10-80 cm tall & triangular
- Leaves: few, most shorter than culms,
- Flower: inflorescence on 2-5 unequal peduncles, spherical tight cluster of 13-25 flattened spikelets, spiklet green with some brown at base, translucent scales, one bract leaf sticking straight up
- Similar plants: *C. articulatus* has no bract leaves
- May-Oct.

Cyperus articulatus
jointed flatsedge**Cyperus articulatus**
jointed flatsedge**Characteristics:**

- Sedge: perennial forming colonies from rhizomes, 50-140 cm tall
- Culms: terete, 2-8 mm thick, septa every 5-50 mm
- Leaves: few, reduced sheaths at base, bracts few, short
- Flower: 4-12 glomerules on slender peduncles up to 12 cm long, up to 20 long spikelets on each
- Similar plants: appears similar to various species in *Schoenoplectus* genus
- May-Oct.

Cyperus difformis
variable flatsedge**Cyperus difformis**
variable flatsedge

Texas Non-Native

Characteristics:

- Sedge: annual growing in clumps with fibrous roots
- Culms: 15-50 cm, sharply triangular
- Leaves: 2-3 unequal leaves wrapped around base, 2-4 bract leaves with one nearly erect
- Flower: dense, round seed heads sessile or on rays to 7 cm, 50-100 < yellow to purple spikelets per inflorescence
- Similar plants: *C. virens* has more lax bracts, less crowded inflorescences

Cyperus elegans
sticky flatsedge

Texas Native

Cyperus elegans
sticky flatsedge

Characteristics:

- Sedge: rare (S.E. Texas only) tufted perennial, grayish green
- Culms: 30-70 cm tall & triangular
- Leaves: sticky, crowded at base
- Flower: inflorescence on 3-10 very unequal peduncles, spherical clusters of 5-13 spikelets, multiple clusters on longest peduncles, sticky
- Similar plants: *C. pseudovegetus*, smaller bract leaves
- June

Cyperus esculentus

yellow nut grass, chufa

Cyperus esculentus

yellow nut grass, chufa

Texas Native

**Characteristics:**

- Sedge: perennial, white rhizomes tuber-like
- Culms: 15-50 cm long
- Leaves: several at basal half of culm, upper ones ascend past inflorescence
- Flower: inflorescence 4-14 cm long past culm, 5-10 unequal peduncles, short spike or spikes at ends made up of 12-50 spikelets, yellow/brown flattened spiklets, scales protrude & spikelet looks jagged
- Summer-Fall

Cyperus ochraceus
pond flatsedge

Cyperus ochraceus
pond flatsedge

Characteristics:

- Sedge: common tufted perennial
- Culms: 11-80 cm long, apically bluntly triangular
- Leaves: several basal, some as long as the culm
- Flower: inflorescences 25-28 cm long, 6-12 unequal peduncles bearing spherical lax heads of 4-24 spikelets, 5-8 bracts, most longer than inflorescence, olive yellow/brown
- Sept.-Nov., throughout the year

Cyperus odoratus
rusty or fragrant flatsedge

Cyperus odoratus
rusty or fragrant flatsedge

Characteristics:

- Sedge: common tufted perennial
- Culms: 5-60 cm tall and triangular
- Flower: brown, numerous unequal peduncles bearing several secondary peduncles, spikes with numerous spikelets, spikes rusty brown towards the middle & green at tips, each spikelet flat, bracts 3-10
- Similar plants: *C. ochraceus*
- Spring-Fall

Cyperus tenuifolius

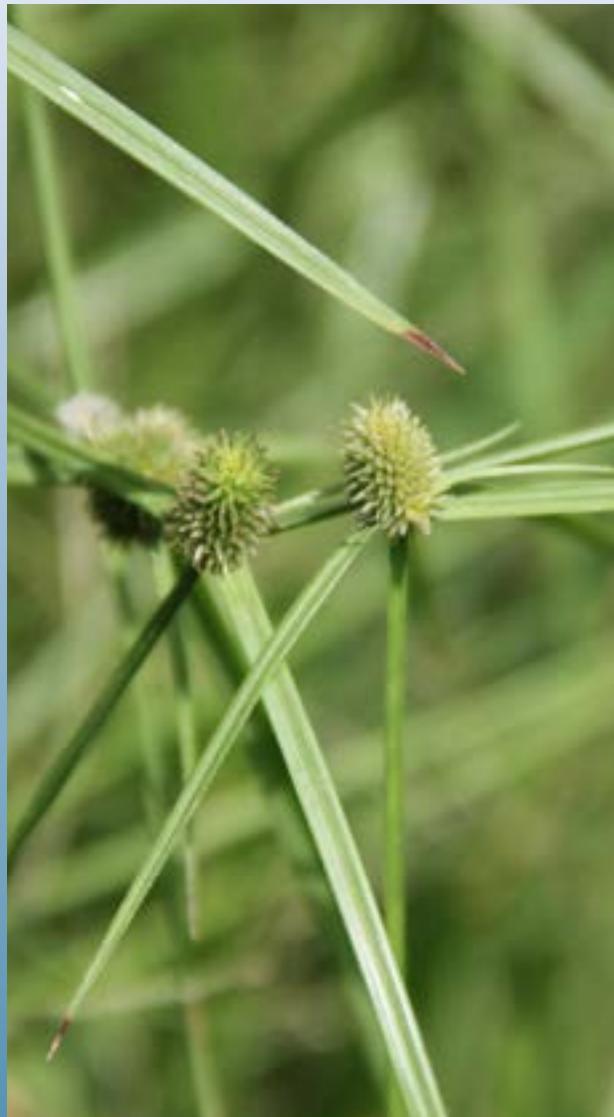

low spikesedge

Cyperus tenuifolius

low spikesedge

**Characteristics:**

- Sedge: Densely tufted annual, grow in clumps of 4-20
- Culms: 1-21 cm, .5-.7 mm thick uniformly
- Leaves: flaccid blades often 2/3 as long as culm or greater, 3 or 4 spreading bract leaves 2-10 cm long
- Flower: single 3-lobed round inflorescence 3-8 mm long with 40 to 170 spikelets
- Sept.-Nov.

Dichromena colorata (Rhynchospora colorata)
starbrush white-top-sedge, umbrella sedge

Texas Native

Dichromena colorata (Rhynchospora colorata)
starbrush white-top-sedge, umbrella sedge

Characteristics:

- Sedge: perennial, orange rhizomes
- Culms: 12-56 cm tall
- Leaves: crowded basally, rolled inward at tip, 3-7 unequal bracts with conspicuous white markings at base
- Flower: spikelets green and ovoid
- Spring-Summer

Eleocharis compressa
flat-stem spikerush

Eleocharis compressa
flat-stem spikerush

Characteristics:

- Sedge: tufted perennial, rhizomatous
- Culms: flattened, 9-20", sheaths reddish
- Flower: terminal spikelet ovoid, seeds golden-brown
- Similar plants: *E. geniculata*
- Spring

Eleocharis geniculata (E. caribea)
capitate spikerush

Eleocharis geniculata (E. caribea)
capitate spikerush

Characteristics:

- Sedge: common tufted annual, purple or green base
- Stems: thick, usually 4-12" tall (range 4-30cm)
- Flower: terminal spikelet ovoid
- Seeds: dark purple
- Similar plants: *E. erythropoda*, OBL, is also 4-12" tall but has a red base
- Summer-Fall

Eleocharis montevidensis
sand spikerush***Eleocharis montevidensis***
sand spikerush**Characteristics:**

- Sedge: tall (18-24"+), common perennial, rhizomatous & dark reddish
- Culms: tall but weak (10-50 cm), soft, fine, erect, sheaths basally dark reddish
- Stem: round
- Flower: blunt spikelets variable in shape, scales dark brownish-purple
- Spring-Summer

Eleocharis quadrangulata
square-stem spikerush

Eleocharis quadrangulata
square-stem spikerush

Characteristics:

- Sedge: coarse perennial
- Culm: only sedge with a square culm (50-80 cm tall), brownish sheaths
- Flower: spikelets cylindric
- Seeds: yellow-brown
- Spring-Fall

Fimbristylis annua
annual fimbry

Characteristics:

- Sedge: tufted annual to 50 cm tall
- Culm: flattened just below inflorescence
- Leaves: thin and long, backs with raised nerves, margins ciliate-scabrid, ligule line of short hairs, longest bract similar to leaves
- Flowers: spikelets oblong, acute, umbellate system of cymes
- Similar plants: *F. autumnalis*, Slender Fimbry, OBL, has more lanceolate spikelets and threadlike bracts
- Oct.

Fimbristylis annua
annual fimbry

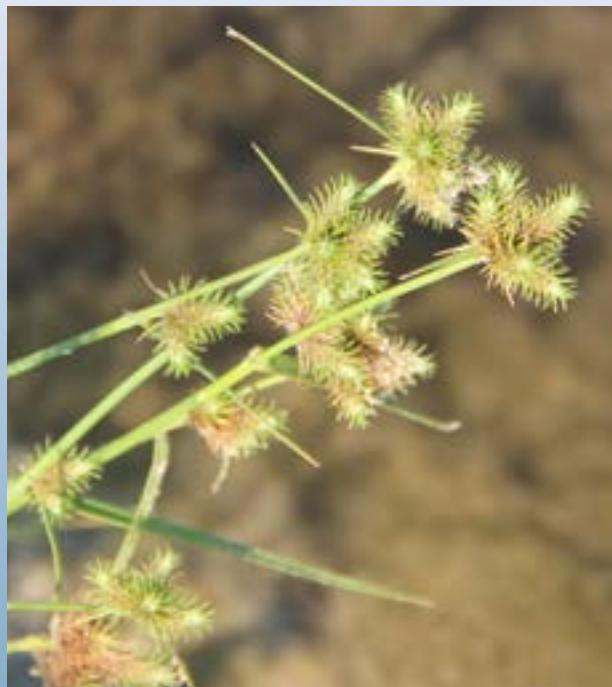

Fuirena simplex

western umbrella-sedge, prickly sedge

Fuirena simplex

western umbrella-sedge, prickly sedge

**Characteristics:**

- Sedge: common rhizomatous perennial
- Culms: 0.1 -1 m tall
- Leaves: reduced to a smooth sheath below, upper more like bracts
- Flowers: condensed glomerule-like inflorescence of 1-10 spikelets that look like tiny cockleburs, oblong-cylindric with white stiff hairs
- Similar plants: *F. squarrosa* OBL, has a hairy sheath, *Carex brittoniana*
- Later Summer-Fall

Obl

Cyperaceae (sedge)

Schoenoplectus californicus (Scirpus californicus)
California bulrush

Obl

Cyperaceae (sedge)

Scirpus californicus (Schoenoplectus californicus)
California bulrush

Characteristics:

- Sedge: tufted perennial from rhizomatous knots
- Culms: tapering rounded/obscurely triangular, 1-3 m tall
- Stem: hollow but firm
- Leaves: few basal brownish fringed sheaths fibrous at the edges
- Flowers: lateral inflorescence (4-12 cm), short bit of stem above inflorescence, 50-150 spikelets
- Similar plants: *S. taebernaemontani* has perfectly round culms
- Spring-summer

222

S. californicus

S. taebernaemontani

Obl

Cyperaceae (sedge)

Schoenoplectus pungens (Scirpus americanus)
three-square, chairmaker's rush

Characteristics:

- Sedge: rhizomatous perennial
- Culms: sharply triangular, 30-120 cm tall, colonial
- Leaves: 2-4 blades rolled inward near base of culm
- Flowers: lateral inflorescence (3-10 cm), solitary or glomerule fo 2-4 ovoid spikelets 7-17 mm long, pointed leaf-like bract above inflorescence 3-5 cm long
- Spring-Summer

Obl

Cyperaceae (sedge)

Schoenoplectus pungens (Scirpus americanus)
three-square, chairmaker's rush

Obl

Cyperaceae (sedge)

Schoenoplectus tabernaemontani (Scirpus validus)
soft-stem bulrush

Characteristics:

- Sedge: rhizomatous perennial, colonial
- Culms: tapering, blunted, triangular, soft, 1-3 m tall
- Leaves: 1-2 sheath-like near base
- Flowers: lateral inflorescence (3-10 cm), 20-120 drooping spikelets 6-10 mm long, pointed leaf-bract above above shorter lateral inflorescence
- Similar plants: *S. georgianus* (shorter (1.3 m), leaves slender and dark green with brownish-black spikelets)
- Similar plants: *S. californicus* has more triangular culms
- Spring-Fall

Obl

Cyperaceae (sedge)

Schoenoplectus tabernaemontani (Scirpus validus)
soft-stem bulrush

S. californicus

S. tabernaemontani

Andropogon glomeratus
bushy bluestem

Andropogon glomeratus
bushy bluestem

Characteristics:

- Grass: perennial
- Culms: to 1.5 m tall
- Leaves: with broad keeled overlapping sheaths
- Flowers: Inflorescence much branched, crowded (> 2 cm wide), broom-like with burnt orange branches
- Sept. - Nov.

Chasmanthium latifolium

inland sea oats or broad leaf wood oats

Chasmanthium latifolium

inland sea oats or broad leaf wood oats

Texas Native**Characteristics:**

- Grass: rhizomatous perennial
- Culms: 0.5-1.3 m rise from mats, purplish & bent at base, above erect, leafy most of height
- Leaves: smooth and wide, sheaths much shorter than internodes & tightly clasping, blades lanceolate 10-20 cm long, 8-16 mm broad, veins markedly parallel
- Flower: panicles very lax, 15-30 cm long, spikelets very drooping at ends of naked branches, spikelet conspicuously flat and wide (oat-looking), 12-18 flowered
- Summer-Fall

Echinochloa colona
jungle rice***Echinochloa colona***
jungle rice**Characteristics:**

- Grass: annual, rooting at nodes, ascending or appressed, often diverging from axis at various angles
- Leaves: ligule obsolete, totally smooth, wraps around stem
- Flower: short smooth spikelets 2.5-3 mm long, not awned, (somewhat like a Paspalum spikelet with flowers/seeds crowded on both sides)
- Jul.-Nov.

Echinochloa crusgalli

barnyard grass

Echinochloa crusgalli

barnyard grass

Texas Non-Native

**Characteristics:**

- Grass: introduced annual
- Culms: thick and branched at base
- Leaves: ligule obsolete, margins rough, sheaths smooth
- Flower: yellowish, spikelets 2.8-4 mm long, has threads out of spikelet stalks and stiff hairs or white cilia between flowers or seeds
- Similar plants: longer than *E. colonus*
- Summer-Fall

Elymus canadensis

Canada wild rye

Elymus canadensis

Canada wild rye

**Characteristics:**

- Grass: perennial
- Culms: basally decumbent, most ascending, 0.8-1.5 m tall
- Leaves: with minute pointed auricle at juncture of leaf and sheath
- Flower: peduncles 7-30 cm long, terminal spikes 3-12 cm long, usually paired spikelets, stiff bristles (awn bending when mature), rye-looking
- Spring

Muhlenbergia linderheimeri
Lindheimers muhly**Muhlenbergia linderheimeri**
Lindheimers muhly**Characteristics:**

- Grass: large tufted perennial
- Culms: stiffly erect, 80-150 cm tall
- Leaves: ligule a membrane
- Flowers: somewhat contracted panicled inflorescence, densely flowered, panicle branches with flowers nearly to base, spikelet one-flowered, usually awnless
- Sept.-Dec.

Fac

Poaceae (grass)

Muhlenbergia reverchonii
seep muhly

Fac

Poaceae (grass)

Muhlenbergia reverchonii
seep muhly

Texas Native

Characteristics:

- Grass: densely tufted perennial
- Culms: stiffly erect 40-80 cm tall, wirey and much branched
- Leaves: membranous ligules 2-4 mm long
- Flowers: open wispy panicle
- Similar plants: *M. lindheimeri* (larger)
- Moist to wet areas
- Aug.-Nov.

Panicum virgatum
switchgrass**Panicum virgatum**
switchgrass**Characteristics:**

- Grass: common large perennial, strong rhizomes
- Culms: stout in large bunches 0.5-3 m tall
- Leaves: sheaths glabrous, ligule a fringed ciliate membrane, blades 10-60 cm, flat, narrow, usually glabrous except base,
- Flowers: large panicle 15-50 cm tall, open and diffuse, one-flowered spikelet pointed
- Late Summer-Fall

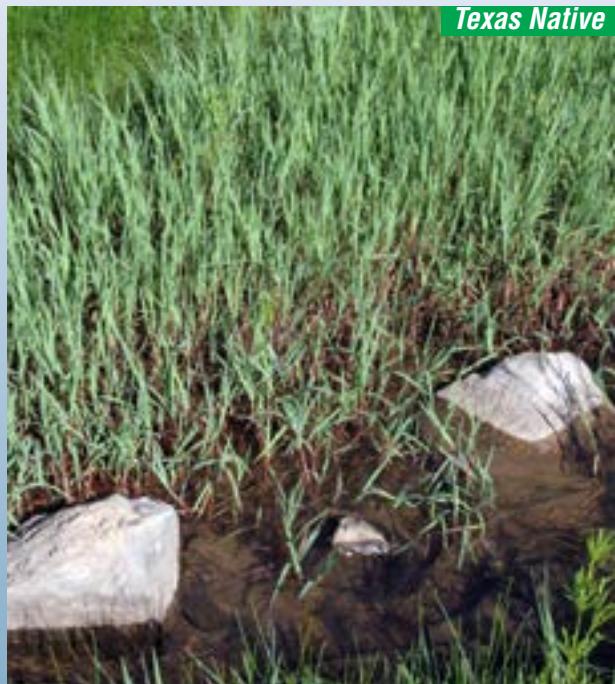

Paspalum distichum

joint paspalum, knotgrass

Paspalum distichum

joint paspalum, knotgrass

Texas Native**Characteristics:**

- Grass: decumbent creeping perennial
- Culms: 0.5-1.5 m long, rooting freely, ascending at ends
- Leaves: ligule a scale, blades 3-12 cm long, 2-6 mm wide, flat, marginally wavy, leaf sheath, ligule, and node often pubescent
- Flowers: racemes usually 2 on a common axis, 2 rows of spiklets on abaxial side of rachis, not fuzzy
- Summer-Fall

Paspalum pubiflorum

hairy-seed paspalum

Texas Native

Paspalum pubiflorum

hairy-seed paspalum

Characteristics:

- Grass: loosely tufted perennial
- Culms: 40-80 cm, 1/3-1/2 culm decumbent and freely rooting then erect
- Leaves: ligule a scale, blades 6-30 cm long, 5-13mm wide, flat, wavy margins, lower sheaths hairy, bright green and smooth
- Flowers: inflorescence usually 3 spikes together, 2 rows of spiklets on abaxial side of rachis, spikelets somewhat hairy or fuzzy, rachis triangular, long spikelets to 3mm
- Similar plants: *P. urvillei*, Vasey Grass, FAC, has > 9 spikes together, but also with fuzzier spikelets; *P. dilatum*, Dallis Grass, FAC, has 5-8 spikes together, also fuzzier
- Spring-Fall

Phalaris caroliniana

Carolina canary grass

Phalaris caroliniana

Carolina canary grass

Texas Native

**Characteristics:**

- Grass: common tufted annual
- Culms: 25-100 cm, sparingly branched basally
- Leaves: ligule a transparent scale, blades 5-20 cm, broad (2-13 mm), soft, flat
- Flowers: dense short panicle 1.5-3 cm long, cylindrical to narrowly elliptical, somewhat spiny or spiky looking
- April-June

Polypogon interruptus
ditch rabbit-foot grass

Polypogon interruptus
ditch rabbit-foot grass

Characteristics:

- Grass: rare perennial
- Culms: rooting at lower nodes, 20-100 cm tall, ligule a scale 4-10 mm long
- Leaves: 4-22 cm long
- Flowers: panicle 3-20 cm long, broad and spike-like (interrupted spike), whorled flower branches 1-5 cm long, awns 5mm long
- Similar plants: *Phalaris caroliniana*, *Alopecurus carolinianus*

Tripsacum dactyloides
eastern gama grass

Tripsacum dactyloides
eastern gama grass

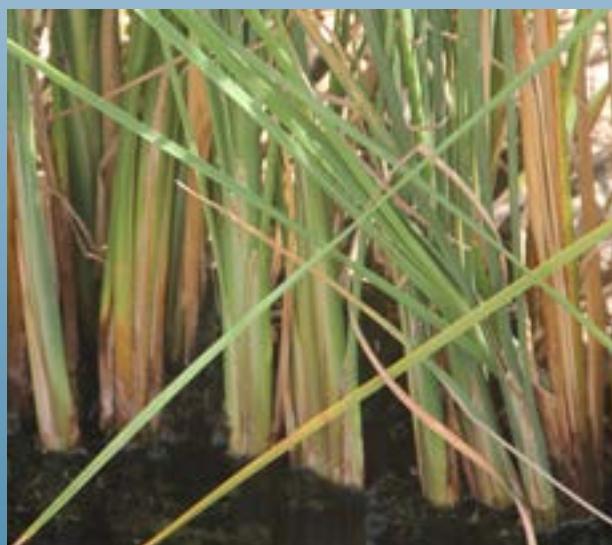

Characteristics:

- Grass: robust rhizomatous perennial, 1.5-3 m tall, glabrous throughout
- Leaves: blades elongate to 2 cm broad, flat, blades pilose above, sheaths glabrous, ligule a ring of hairs, mature purple margins, (base of leaf flattened)
- Flowers: inflorescence 15-25 cm long, terminal, spike-like racemes, lower ones fertile females (on opposite sides of a thick, hard, rounded rachis), many paired staminate spikelets above (corn-like look)
- Seeds: large kernel/bead-like
- Similar plants: *Sorghum halpence*
- Apr.-June (-fall)

Typha domingensis
southern cattail

Typha domingensis
southern cattail

Characteristics:

- Forb: aquatic perennial, rhizomatous
- Stems: simple, slender, jointless up to 3 m tall, white pith
- Leaves: long erect, linear, flat, yellowish-green, 7-15 mm wide, shorter than inflorescence, sheaths present
- Flowers: staminate portion at tip (20-40 cm) is separated from whitish-brown pistilate portion, spike < 1.3 cm wide
- Similar plants: *T. latifolia* (thicker), *T. angustifolia* (never over 1.5 m tall)
- Apr.-May

Typha latifolia
broad-leaf cattail

Typha latifolia
broad-leaf cattail

Characteristics:

- Forb: aquatic perennial, rhizomatous
- Stem: simple, jointless up to 3 m tall, white pith
- Leaves: long erect, linear, flat, yellowish-green, 6-23 mm wide, longer than inflorescence, sheaths present
- Flowers: staminate portion 12 cm not separated from whitish-brown pistillate portion, spike > 2 cm wide, most common cattail
- Mar.-May

Canna flaccida

canna lily or bandana of the Everglades

Canna flaccida

canna lily or bandana of the Everglades

Texas Native**Characteristics:**

- Forb: perennial to 75 cm tall, green throughout
- Leaves: alternate with sheathing petioles, oblong-elliptic 20-40 cm long & to 20 cm wide
- Flower: small paired in terminal panicles, 3 greenish bractlike sepals, 3 reddish petals united to form a 3-3.5 cm tubed corolla, longer 5 cm stamenoidia, capsules 2.5-3.5 cm long
- Apr.-June

Thalia dealbata
powdery thalia***Thalia dealbata***
powdery thalia**Characteristics:**

- Forb: erect scapous herb, rhizomatous
- Leaves: large (Banana or Canna-like), alternate, 3 large basal, long petioled, pronounced numerous veins, ovate lanceolate 20-40 cm long, sheathing, scapes 10-20 cm tall, white powder on back of leaf
- Flowers: inflorescence white powdery, flowers purplish, orange, or pink striped in panicle spikes surrounded by several bracts, 3-petaled, irregular corolla with lip
- Fruit: a capsule, berry-like
- Oct.-Nov.

Eichhornia crassipes
water hyacinth

Texas Non-Native

Eichhornia crassipes
water hyacinth

Characteristics:

- Forb: floating introduced aquatic, abundant fibrous roots
- Leaves: ovate to rhombic to reniform (to 150 cm wide), leathery thick, spongy petioles
- Flower: inflorescence a terminal spike of showy, light blue/lavender, six petaled (4-6 cm wide), two-lipped, yellow spot on upper petal, peduncle from a spathe, many seeded capsule
- Apr.-July

Obl

Pontederiaceae (pickerelweed)

Heteranthera (Zosterella) dubia
water star grass

Obl

Pontederiaceae (pickerelweed)

Heteranthera (Zosterella) dubia
water star grass

Characteristics:

- Forb: aquatic submerged perennial, rooting at nodes in mud
- Leaves: linear ribbon or grass-like to 15 cm long, sessile, almost transparent, finely parallel-veined with distinct mid-vein, sheath with stipule-like appendages
- Flower: exposed on the surface, solitary from a spathe, pale yellow perianth radially symmetrical (star-like), from long tube
- Fruit: a many-seeded capsule
- Similar plants: *H. limosa* has long petiole & ovate leaf, and a blue flower
- Apr.-June

Pontederia cordata
pickerelweed

Pontederia cordata
pickerelweed

Characteristics:

- Forb: rhizomatous perennial 40-80 cm tall, thick white stalk
- Leaves: basal, petioles longer than blades with long clasping basal portion, narrowly deltoid-ovate to triangular lanceolate, rounded truncate to deeply cordate base (basal leaf lobes usually more rounded than the white-flowered)
- Flowers: inflorescence a slender 15 cm terminal spike from a spathe, perianth two-lipped, violet-blue, upper lip with yellow spot or spots
- Fruit: edible 1-seeded
- Similar plants: *Sagittaria latifolia* (white-flowered), *P. cordata* has more rounded basal leaf lobes
- June-Sept.

Hymenocallis liriosme

western spider lily

Hymenocallis liriosme

western spider lily

**Characteristics:**

- Forb: glabrous perennial from large bulb, 35-100 cm tall
- Leaves: basal, strap-like, bending, faint perpendicular veins
- Flower: inflorescence an umbel, snowy white tinged with yellow center, 6 slender petals, showy to 20 cm diameter, sweet scented, perianth with long slender tube (6-8 cm long) and conspicuous spreading linear segments (spider-looking), topped with a large cup-like crown (corona)
- Fruit: a few seeded capsule
- Mar.-May

pond flatsedge (<i>Cyperus ochraceus</i>)	p. 202
pondweed, long-leaf (<i>Potamogeton nodosus</i>)	p. 160
possomhaw (<i>Ilex decidua</i>)	p. 86
powdery thalia (<i>Thalia dealbata</i>)	p. 260
prickly sedge (<i>Fuirena simplex</i>)	p. 220
purple Ammannia (<i>Ammannia coccinea</i>)	p. 72
purple pluchea (<i>Pluchea odorata</i>)	p. 144
purlane (<i>Veronica peregrina</i>)	p. 114

R

rattle bush (<i>Sesbania drummondii</i>)	p. 62
river fern (<i>Thelypteris kunthii</i>)	p. 6
roundleaf seedbox (<i>Ludwigia repens</i>)	p. 84
rush, chairmaker's (<i>Schoenoplectus pungens</i>)	p. 224
rush, grass-leaf (<i>Juncus marginatus</i>)	p. 174
rush, soft (<i>Juncus effusus</i>)	p. 172
rush, Texas (<i>Juncus texanus</i>)	p. 176
rush, Torrey's (<i>Juncus torreyi</i>)	p. 178

Index of common names:

rusty flatsedge (<i>Cyperus odoratus</i>)	p. 204
S	
saltmarsh camphor-weed (<i>Pluchea odorata</i>)	p. 144
sand spikerush (<i>Eleocharis montevidensis</i>)	p. 214
scouring rush (<i>Equisetum laevigatum</i>)	p. 2
sedge, Britton's (<i>Carex brittoniana</i>)	p. 180
sedge, Cherokee (<i>Carex cherokeeensis</i>)	p. 182
sedge, Emory's (<i>Carex emoryi</i>)	p. 184
sedge, Frank's (<i>Carex frankii</i>)	p. 186
sedge, little-tooth (<i>Carex microdonta</i>)	p. 188
sedge, starbrush white-top (<i>Dichromena colorata</i>)	p. 208
sedge, western umbrella (<i>Fuirena simplex</i>)	p. 220
spikesedge, low (<i>Cyperus tenuifolius</i>)	p. 206
seep muhly (<i>Muhlenbergia reverchonii</i>)	p. 240
Sesbania, hemp (<i>S. herbacea</i>)	p. 64
short-point flatsedge (<i>Cyperus ochraceus</i>)	p. 202
shrubby water primrose (<i>Ludwigia octovalvis</i>)	p. 78
smartweed, dense-flower (<i>Polygonum densiflorum</i>)	p. 40
smartweed, marshpepper (<i>Polygonum hydropiper</i>)	p. 42
smartweed, pale (<i>Polygonum lapathifolium</i>)	p. 46
smartweed, swamp (<i>Polygonum hydropiperoides</i>)	p. 44
sneezeweed, common (<i>Helianthus autumnalis</i>)	p. 136
sneezeweed, elegant (<i>Helianthus elegans</i>)	p. 138
soft rush (<i>Juncus effusus</i>)	p. 172
soft-stem bulrush (<i>Schoenoplectus tabernaemontani</i>)	p. 226
southern calla (<i>Typha domingensis</i>)	p. 254
southern maidenhair fern (<i>Adiantum capillus-veneris</i>)	p. 4
southern najad (<i>Najas guadalupensis</i>)	p. 156
southern water fern (<i>Marsilea vestita</i>)	p. 8
spatterdock (<i>Nuphar lutea</i>)	p. 22
spicebush (<i>Lindera benzoin</i>)	p. 14
spider-lily (<i>Hymenocallis littoralis</i>)	p. 268
spotted water-hemlock (<i>Cicuta maculata</i>)	p. 90
spikerush, capitata (<i>Eleocharis geniculata</i>)	p. 212
spikerush, flat-stem (<i>Eleocharis compressa</i>)	p. 210
spikerush, sand (<i>Eleocharis montevidensis</i>)	p. 214
spikerush, square-stem (<i>Eleocharis quadrangulata</i>)	p. 216
square-stem spikerush (<i>Eleocharis quadrangulata</i>)	p. 216
starbrush white-top sedge (<i>Dichromena colorata</i>)	p. 208
sticky flatsedge (<i>Cyperus elegans</i>)	p. 198
stiff marsh bedstraw (<i>Galium tinctorium</i>)	p. 124
stream loosestrife (<i>Lythrum ovalifolium</i>)	p. 76
sumpweed (<i>Iva annua</i>)	p. 140
swamp smartweed (<i>Polygonum hydropiperoides</i>)	p. 44
swamp sunflower (<i>Helianthus autumnalis</i>)	p. 136
switchgrass (<i>Panicum virgatum</i>)	p. 242
sycamore (<i>Platanus occidentalis</i>)	p. 34
T	
tape-grass (<i>Vallisneria americana</i>)	p. 158
taper-leaf flatsedge (<i>Cyperus acuminatus</i>)	p. 192
taro (<i>Colocasia esculenta</i>)	p. 166
Texas rush (<i>Juncus texanus</i>)	p. 176
three-square (<i>Schoenoplectus pungens</i>)	p. 224
toothcup (<i>Ammannia coccinea</i>)	p. 72
Torrey's rush (<i>Juncus torreyi</i>)	p. 178
true water-cress (<i>Nasturtium officinale</i>)	p. 56
U	
umbrella sedge (<i>Dichromena colorata</i>)	p. 208
upright burhead (<i>Echinodorus berteroii</i>)	p. 148

Index of common names:

V

- variable flatsedge (*Cyperus difformis*) p. 196
variable water-milfoil (*Myriophyllum heterophyllum*) p. 68

W

- water celery (*Vallisneria americana*) p. 158
water clover (*Marsilea vestita*) p. 8
water-cress (*Nasturtium officinale*) p. 56
water daisy (*Acmella oppositifolia* var. *repens*) p. 128
water hyacinth (*Eichhornia crassipes*) p. 262
water hyssop, coastal (*Bacopa monnieri*) p. 108
water hyssop, disk (*Bacopa rotundiflora*) p. 110
water-meal (*Wolffia columbiiana*) p. 170
water-milfoil, Eurasian (*Myriophyllum spicatum*) p. 70
water-milfoil, variable (*Myriophyllum heterophyllum*) p. 68
water-pennywort (*Hydrocotyle verticillata*) p. 94
water pimpernel (*Samolus parviflorus*) p. 58
water primrose (*Ludwigia peploides*) p. 82
water-shield (*Brasenia schreberi*) p. 20
water smartweed (*Polygonum hydropiper*) p. 42
water speedwell (*Veronica anagallis-aquatica*) p. 112
water star grass (*Heteranthera dubia*) p. 264
water-willow (*Justicia americana*) p. 116
western spider-lily (*Hymenocallis liriosme*) p. 268
western umbrella-sedge (*Furcraea simplex*) p. 220
white water-lily (*Nymphaea odorata*) p. 24
widespread maiden fern (*Thelypteris kunthii*) p. 6
wild columbine (*Aquilegia canadensis*) p. 30
willow (*Salix nigra*) p. 54
willow-weed (*Polygonum lapathifolium*) p. 46
winged loosestrife (*Lythrum californicum*) p. 74
Wolffia (*Wolffia columbiiana*) p. 170
wood sage (*Teucrium canadense*) p. 100

Y

- yellow cow-lily (*Nuphar lutea*) p. 22
yellow lotus (*Nelumbo lutea*) p. 18
yellow nutgrass (*Cyperus esculentus*) p. 200
yerba de tajo (*Eclipta alba*) p. 134
